

World projections of calories available from crops, 2011-50

Economic Research Service
U.S. DEPARTMENT OF AGRICULTURE

Calories (trillions)

Note: Three illustrative scenarios are shown: a static diet (per capita consumption of food calories remains constant at 2011 levels in all world regions) with medium population growth resulting in 9.75 billion people in 2050; an income-driven diet with medium population growth; and an income-driven diet with high population growth resulting in 10.8 billion people in 2050. The static diet is a point of comparison to quantify the effect of income growth on food consumption. Model simulations begin in 2011.

Population And Food:

Population and Food in the Early Twenty-first Century Nurul Islam, 1995-01-01 The IFPRI roundtable with its focus on the prospects of a long term balance between food demand and supply provided a link between the two conferences as the adequacy of food supply at affordable prices for future populations is a crucial element in a strategy designed to alleviate poverty and accelerate growth in the context of an increasing population Population and Food National Academy of Sciences (U.S.). Committee on World Food, Health, and Population, 1975 Population and Food National science foundation, 1975 **Population and Food** Tim Dyson, 1999 World Population and Food Supply J. H. Kelley, 1992-02-01 Surveying the impact of population growth where it is believed to matter most the rural areas of developing countries this volume explicates its effects on food production It examines such factors as forecasts of global food output technological progress in agriculture choice of agricultural systems and population growth and access to land **Population and Food Supply** Robert Carter Cook, 1962 *Key Issues in Population and Food Policy* Eliot Glassheim, Charles M. Population and food: crucial issues National Academy of Sciences (U.S.). Committee on World Food, Health, and Population, **FAO Studies in Food and Population** Maaza Bekele, 1976 Abstract The balance between food supply and population is a major concern The gravity of the global situation is increasingly apparent The future ability of man to feed growing populations is regarded as a problem needing interdependent national and global solution 21 speeches by world authorities at major FAO occasions during a 20 year period show a change in emphasis from an attitude of adapting food production to population requirements to realization of an urgent need for simultaneous action on both fronts Issues of agricultural development food supply human values hunger demographics world food supplies economic growth population policy innovations and political will are addressed New Protein Foods Aaron M. Altschul, 2013-10-22 Approx 408 pages

Food for the Future United Nations Population Fund, 1996 Unless women are placed at the centre of efforts to increase food production and are given support for their reproductive rights and reproductive health vital opportunities will be missed to meet the world's present and future food needs **Nutrition among Vulnerable Populations** Heather

Eicher-Miller, Marie Kainoa Fialkowski Revilla, 2020-11-27 Food insecurity and low resources continue to be a burden influencing the health well being growth and development of millions of U S children and adults Groups and individuals experiencing restrained access to food are our neighbors individuals we may see each day and individuals who we may not interact with or see because of their isolated situations They include the elderly those experiencing mental illness veterans certain race ethnic groups adolescents young women with children those living in rural areas and those using food pantries

among others Many of these groups both hidden and visible have rates of food insecurity above the national average that are resistant to national improvements in food security Yet attention to these subsets of the population is imperative to improve U S health and nutrition and to reduce rates of chronic disease Many groups face specific barriers to maintaining sufficient food for example rural populations may find it difficult to access federal food assistance or other resources such as food pantries and nutrition education because of distance or lack of consistent internet access separating them from these resources Further their remote locations may make it difficult to obtain the types of foods that they prefer Other specific barriers may include limited facilities and equipment for food preparation access to culturally appropriate foods and preparation supplies and foods that complement the foods that they already have Tailored approaches to quantify access to food the nutrition environment dietary intake and other barriers are necessary to build successful interventions and to quantify the needs of these populations
