Scheduling Computer And Manufacturing Processes:

Scheduling Computer and Manufacturing Processes Jacek Blazewicz, Klaus H. Ecker, Erwin Pesch, Günter Schmidt, Jan Weglarz, 2013-06-29 Let us first describe the purpose of this book starting with the explanation of its title In general scheduling problems can be understood very broadly as the problems of allocating resources over time to perform a set of tasks being parts of some processes among which computational and manufacturing ones are most important Tasks individually compete for resources which can be of a very different nature e g manpower money processors machines energy tools The same is true for task characteristics e g ready times due dates relative urgency weights functions describing task processing in relation to allotted resources Moreover a structure of a set of tasks reflecting precedence constraints among them can be defined in different ways In addition different criteria which measure the quality of the performance of a set of tasks can be taken into account It is easy to imagine that scheduling problems understood so generally appear almost everywhere in real world situations Of course there are many aspects concerning approaches for modeling and solving these problems which are of general methodological importance On the other hand however some classes of scheduling problems have their own specificity which should be taken into account Since it is rather impossible to treat all these classes with the same attention in a framework of one book some constraints must be put on the subject area considered In the case of this book these constraints are as follows

Jacek Blazewicz, 1996-09-17 This book is a continuation of *Scheduling in Computer and Manufacturing Systems* 1 two editions of which have received kind acceptance of a wide readership As the previous position it is the result of a collaborative German Polish project which has been partially supported by Committee for Scientific Research 2 and DFG We appreciate this help We decided to treat this work as a new book rather than the third edition of the previous one due to two important reasons First of all the contents has been changed significantly This concerns not only corrections we have introduced following the suggestions made by many readers we are very grateful to all of them and taking into account our own experience but first of all this means that important new material has been added In particular in the introductory part the ideas of new local search heuristics i e generally applicable global optimization strategies with a simple capability of learning ejection chains genetic algorithms have been presented In the framework of parallel processor scheduling topics of imprecise computations and lot size scheduling have been studied Further on flow shop and job shop scheduling problems have been studied much more extensively both from the viewpoint of exact algorithms as well as heuristics

Jacek Blazewicz, Klaus Ecker, Günter Schmidt, Jan Weglarz, 2012-12-06 This book is the result of a joint German Polish project which has been partially supported by the Committee for Scientific Research 1 and the Deutsche Forschungsgemeinschaft 2 We appreciate the help of both institutions The planning and preparation of the manuscript was an iterative and rather lengthy process which we had to stop at a certain stage but it does not mean that we were fully

satisfied with the output Thus comments and improvements will be appreciated In the meantime we would like to thank many colleagues who already discussed with us different topics presented in the book We are not able to list all of them but we would like to express our special gratitude toward Peter Brucker Gerd Finke Adam Janiak Wieslaw Kubiak Kathryn Stecke and Dominique de Werra As to the technical help in preparing the manuscript our thanks are due to Barbara Blarewicz Brigitte Ecker Maria Kaminska and Brigitte Sand especially for their typing efforts

Scheduling in Computer and Manufacturing Systems Jacek Blazewicz,Klaus H. Ecker,Günter Schmidt,Jan Weglarz,1994-07-12 A theoretical and application oriented analysis of deterministic scheduling problems arising in computer and manufacturing environments The important classical results are surveyed with particular attention paid to single processor scheduling along with general models such as resource constrained scheduling flexible flow shops dynamic job shops and special flexible manufacturing systems Polynomial and exponential time optimization algorithms as well as approximation and heuristic ones are presented using a Pascal like notation before being discussed in the light of particular problems Basic concepts from scheduling theory and related fields are described to assist less advanced readers
