## Scattering Theory For Automorphic Functions:

**Scattering Theory for Automorphic Functions** Peter D. Lax, Ralph S. Phillips, 1976 The application by Fadeev and Pavlov of the Lax Phillips scattering theory to the automorphic wave equation led Professors Lax and Phillips to reexamine this development within the framework of their theory This volume sets forth the results of that work in the form of new or more straightforward treatments of the spectral theory of the Laplace Beltrami operator over fundamental domains of finite area the meromorphic character over the whole complex plane of the Eisenstein series and the Selberg trace formula  
CONTENTS 1 Introduction 2 An abstract scattering theory 3 A modified theory for second order equations with an indefinite energy form 4 The Laplace Beltrami operator for the modular group 5 The automorphic wave equation 6 Incoming and outgoing subspaces for the automorphic wave equations 7 The scattering matrix for the automorphic wave equation 8 The general case 9 The Selberg trace formula      Scattering Theory for Automorphic Functions and Its Relation to L-functions

Lax, Ralph Saul Phillips, 1976      **Automorphic Forms and Related Topics** Samuele Anni, Jay Jorgenson, Lejla Smajlović, Lynne Walling, 2019-06-19 This volume contains the proceedings of the Building Bridges 3rd EU US Summer School and Workshop on Automorphic Forms and Related Topics which was held in Sarajevo from July 11 22 2016 The articles summarize material which was presented during the lectures and speed talks during the workshop These articles address various aspects of the theory of automorphic forms and its relations with the theory of L functions the theory of elliptic curves and representation theory In addition to mathematical content the workshop held a panel discussion on diversity and inclusion which was chaired by a social scientist who has contributed to this volume as well This volume is intended for researchers interested in expanding their own areas of focus thus allowing them to build bridges to mathematical questions in other fields

Functional Analysis Peter D. Lax, 2014-08-28 Includes sections on the spectral resolution and spectral representation of self adjoint operators invariant subspaces strongly continuous one parameter semigroups the index of operators the trace formula of Lidskii the Fredholm determinant and more Assumes prior knowledge of Naive set theory linear algebra point set topology basic complex variable and real variables Includes an appendix on the Riesz representation theorem      *Selected Papers II* Peter D Lax, 2005-05-20 A renowned mathematician who considers himself both applied and theoretical in his approach Peter Lax has spent most of his professional career at NYU making significant contributions to both mathematics and computing He has written several important published works and has received numerous honors including the National Medal of Science the Lester R Ford Award the Chauvenet Prize the Semmelweis Medal the Wiener Prize and the Wolf Prize Several students he has mentored have become leaders in their fields Two volumes span the years from 1952 up until 1999 and cover many varying topics from functional analysis partial differential equations and numerical methods to conservation laws integrable systems and scattering theory After each paper or collection of papers is a commentary placing the paper in

context and where relevant discussing more recent developments Many of the papers in these volumes have become classics and should be read by any serious student of these topics In terms of insight depth and breadth Lax has few equals The reader of this selecta will quickly appreciate his brilliance as well as his masterful touch Having this collection of papers in one place allows one to follow the evolution of his ideas and mathematical interests and to appreciate how many of these papers initiated topics that developed lives of their own

E.B. Christoffel BUTZER,FEHER,2013-10-05 This memorial volume is dedicated to E B Christoffel on the occasion of the 150th anniversary of his birth Its aim is on the one hand to present the life of Christoffel and the scientific milieu in which he worked and on the other hand to present a survey of his work not only in its historical context but especially in the frame of contemporary mathematics and physics For one thing this book contains expanded versions of the twelve invited lectures given at the International Christoffel Symposium held on November 8 11 1979 at Aachen and Monschau For another the scope of these papers has been broadened by soliciting some forty five additional invited articles concerned either with further aspects of the work of Christoffel or with specialized topics in fields in which Christoffel had worked This should give the reader a greater opportunity to appreciate the richness of Christoffel's contributions to the mathematical and physical sciences and not only its immediate impact but also its subsequent influence It can be discerned that Christoffel did basic work not only in differential geometry or better still in classical tensor analysis thereby supplying the mathematical foundations of Einstein's theory of general relativity but also in a variety of other areas of mathematics The scope of Christoffel's work can be appreciated from the following synopsis of the thirteen chapters into which the festschrift is divided Chap
