Schlieren and Shadowgraph Techniques G.S. Settles, 2012-10-19 Schlieren and shadowgraph techniques are basic and valuable tools in various scientific and engineering disciplines They allow us to see the invisible the optical inhomogeneities in transparent media like air water and glass that otherwise cause only ghostly distortions of our normal vision These techniques are discussed briefly in many books and papers but there is no up to date complete treatment of the subject before now The book is intended as a practical guide for those who want to use these methods as well as a resource for a broad range of disciplines where scientific visualization is important The colorful 400 year history of these methods is covered in an extensive introductory chapter accessible to all readers

Experimentelle Untersuchung der Innenverdichtung eines Hyperschalltriebwerkeinlaufs mit Überschalldurchströmung Carsten Diedrich Herrmann, 2007-01-26 Thema der Forschungsarbeit ist die experimentelle Untersuchung der Innenverdichtung von Staustahltriebwerken mit überschallverbrennung scramjet Im Fokus steht hierbei der Isolator der sich zwischen dem Einlauf und der Brennkammer befindet Die Aufgabe des Isolators ist die Verzergerung der in das Triebwerk eintretenden Strömung auf moderate überschallmachzahlen mit einhergehender Druckerhöhung Des weiteren muss der Isolator die Ausbreitung der von der Verbrennung ausgehenden Druckschwankungen verhindern isolieren Das besondere an den vorliegenden Versuchen ist dass der Isolator mit einer unsymmetrischen Anströmung wie sie durch einen realen Triebwerkeinlauf vorgegeben wird beaufschlagt wird Um eine Datenbasis für die Auslegung von Isolatoren zu gewinnen wurden verschiedene Modelle bei simulierten Flugmachzahlen von $M 3.3$ und $M 4$ getestet Für die Untersuchungen standen neben konventioneller Druck und Temperaturmesstechnik eine Farbschlierenoptik zur Verfügung mit deren Hilfe die Druckgradienten innerhalb des Triebwerksmodells sichtbar gemacht werden konnten Ein besonderer Augenmerk gilt der Betriebssicherheit der durch Shock Waves und Verdichtungsstöße dominierten Triebwerksdurchströmung Mit Hilfe des eingesetzten optischen Verfahrens können die entstehenden Stoßkonstellationen und Stoß Grenzschicht Interaktionen sehr gut visualisiert werden Ein Vergleich der experimentellen Daten mit parallel durchgeführten numerischen Berechnungen ermöglicht weitere Aussagen über die beobachteten Strömungsphänomene

Abstract The main topic of the research project is the experimental investigation of the inner compression of ramjet inlets with supersonic combustion scramjet The work focuses on the isolator section located between the Inlet and the combustion chamber The main Task of the isolator is the deceleration of the incoming air to moderate supersonic mach numbers and thus an increase of pressure Furthermore the isolator has to protect the inlet against the pressure fluctuations released by the combustion process In the particular measurements the Isolator was

charged with an asymmetric flow as it will be given by an Scramjet inlet To achieve a database for the design of Isolator sections different geometries are tested at simulated flight mach numbers of M 3.3 and M 4 The investigations were done by use of conventional pressure and temperature measurements as well as a colour schlieren optic allowing the visualisation of pressure gradients within the tested model Special attentions were given to the stable operation of the shock and shock train dominated flow Using the optical system the shock systems and the shock boundary interaction could be visualised very well A comparison between the experimental data and numerical calculations done in parallel leads to additional Information about the observed flow phenomena Stichwörter: Überschall Triebwerk Isolator Innenverdichtung Strömungstechnik Luft und Raumfahrt XXIX Messtechnisches Symposium Thomas Fröhlich, Eberhard Manske, 2015-09-14 The AHMT is the working group of university professors in measurement technology DACH This volume is a compilation of all invited lectures at the 19th Symposium of the AHMT Topics include model based analysis of measurement data micro optic measurement technology gas measurement technology and impedance measurement Experimental Aerodynamics Stefano Discetti, Andrea Ianni, 2017-03-16 Experimental Aerodynamics provides an up to date study of this key area of aeronautical engineering The field has undergone significant evolution with the development of 3D techniques data processing methods and the conjugation of simultaneous measurements of multiple quantities Written for undergraduate and graduate students in Aerospace Engineering the text features chapters by leading experts with a consistent structure level and pedagogical approach Fundamentals of measurements and recent research developments are introduced supported by numerous examples illustrations and problems The text will also be of interest to those studying mechanical systems such as wind turbines **Energetic Materials** Mark J. Mezger, Kay J. Tindle, Michelle Pantoya, Lori J. Groven, Dilhan Kalyon, 2017-07-06 This book will take an in depth look at the technologies processes and capabilities to develop and produce next generation energetic materials for both commercial and defense applications including military mining operations oil production and well perforation and construction demolition It will serve to highlight the critical technologies latest developments and the current capability gaps that serve as barriers to military fielding or transition to the commercial marketplace It will also explain how the processing technologies can be spun out for use in other non energetics related industries Mechanics of Biological Systems and Materials & Micro- and Nanomechanics, Volume 4 Martha E.
