The Business Model: How to Develop New Products, Create Market Value and Make the Competition Irrelevant

Alexander Chernev, 2017-03-19 New product success is often attributed to intuition. Yet while some products born from intuition do make it big, many others crash and burn. The reason is that intuition is only one aspect of new product development. The other key ingredient of success is having a business model that outlines the ways in which new products will create market value. This book offers a systematic approach to identifying market opportunities and developing breakthrough business models. It outlines the key principles of business model generation, presents a value-based framework for developing viable new offerings, and provides a set of practical tools for creating a meaningful value proposition that drives market success. The business model framework outlined in this book applies to a wide range of companies: startups and established enterprises, consumer packaged goods companies and business-to-business enterprises, high tech and low tech ventures, online and brick-and-mortar entities, product manufacturers and value-added service providers, nonprofit organizations, and profit-driven companies. Practical, actionable, and succinct, *The Business Model* is the essential reference and how-to guide for everyone seeking to achieve market success, from entrepreneurs to experienced managers, from senior executives to product designers, from those creating new market offerings to those improving on existing ones. This book is for those passionate about building great products that create market value and disrupt industries.

The business model cycle Sophia von Berg, 2020-12-17 Today, firms all over the world have to deal with dynamic business environments. Fast-moving digitalization has made information more transparent, strengthening the role of the customer. At the same time, the provider can have a much closer relationship with the user thanks to real-time communication. However, corporate practice does not have a process for developing dynamic business models, and user-centric business models that can be designed and changed using smart technologies have not yet been systematically integrated. To stay competitive, companies need to rise to this challenge. The aim of this dissertation was to develop a dynamic user-centric process model for business model design and change and to evaluate the model's ability to maintain a competitive advantage in the mobility sector. First, the differences between static, dynamic, and user-centric business models and their corresponding attributes were deduced. Then, these findings were combined into a process model using system dynamics logic. This model considers the user a co-creator of value and helps managers react to real-time changes in their business model environment. Finally, a mobility sector case study is presented to highlight the relevance of this model to real-world application. This business model cycle (BMC) supports the strategic management of dynamic user-centric business model design and change activities. It describes a step-by-step procedure of business model design that includes ideation, prototyping, and integration of business model options. Moreover, it allows continuous monitoring of the business model environment and adaptation of the model accordingly. At the same time, bidirectional interaction between the user and provider is possible, allowing the provider to adapt to their users' needs. The

BMC is unique in that these processes can take place simultaneously Finally the real world case study in the mobility sector confirmed that using the BMC for strategic management maintains a lasting competitive business advantage
