immer wieder aufs Neue gelingt oder eben misslingt **The Tolerability of Risk** Frederic Boudier, David Slavin, 2013-09-05 There is an increasing dissatisfaction about how risk is regulated leading to vivid debates about the use of risk assessment and precaution As a result academics government officials and industry leaders are calling for new approaches and fresh ideas This book provides a historical and topical perspective on the alternative concept of Tolerability of Risk and its concrete regulatory applications In the UK Tolerability of Risk has been developed into a sophisticated framework particularly within the health and safety sectors It is expected to guide decision makers when applying their legal obligation of keeping risks as low as practically reasonable Could Tolerability of Risk become a wider source of inspiration across the full scope of risk analysis and management Written by leading academics and risk practitioners from industry and government The Tolerability of Risk presents a summary of theoretical perspectives on risk approaches providing a detailed elicitation of the methods and approaches used to build the Tolerability of Risk framework and examining the prospect of universal application of that framework From nuclear power to environmental pollution climate change and drug testing the Tolerability of Risk framework may offer a workable pragmatic solution for balancing risks against the costs involved in controlling them as well as developing the institutional capacity to make effective decisions in all jurisdictions worldwide **The Illusion of Certainty** Erik Rifkin, Edward Bouwer, 2007-09-23 Risk analysis and risk assessment have been with us long enough for the terms to sound familiar to most people Standard fare for the nuclear power industry and the military for a half a century or more risk assessment is now a routine aspect of environmental management public health and individual medical decision making There have been popular books on risk and the current poker craze will likely spread risk concepts to an even wider and younger audience Yet despite all of this extensive and varied experience we the analysts and practitioners have not done nearly enough to explain to the people who need to know what they need to know especially the uncertainty inherent in risk estimates There are many instances in which the failure to communicate risk information accurately or completely has had an important and material impact on decisions and actions I have been involved in some of these ranging from local plans for water management to national decisions about nuclear waste I have seen first hand the effects of poorly done risk assessments and bad risk communication and especially the way in which the uncertainty of risk estimates is handled or mishandled The consequences of doing this wrong are high It's high time that we addressed this gap in understanding and this book is an excellent and important step in doing so **The SAGE Handbook of Nature** Terry Marsden, 2018-03-23 An ambitious retrospective and prospective overview of the field that aims to position Nature the environment and natural processes at the heart of interdisciplinary social sciences *Risks in Modern Society* Hans-Jürgen Bischoff, 2008-09-30 The International Section on Machine and System Safety was founded in 1975 to deal with questions on occupational risks in this field at the international level It is a member of the Special Commission on Prevention of the International Social Security Association ISSA The Special Commission is a body within ISSA that focuses on work related risks It has 11 international Sections as

members ISSA was founded in 1927 with its headquarters in Geneva It is working worldwide in over 150 countries with nearly 370 member institutions from all elds of social security TheSection on Machine and System Safety when it was founded had its focus on machine safety particularly on the ma facturing of safe machinery on assisting developing countries to be able to buy safe used machinery and on delivering clear operating instructions Our members and partners are institutions for safety and health at work insurance companies dealing with work related risks research institutions and various enterprises e g manufacturers importers and users of machines and systems installations We thus bring together the experiences of our members and partners The role of the operators soon grew in importance and their capability for ha ling machinery became an important factor for the safety and success of enterprises The growing importance and complexity of handling different man machine environment situations created new challenges and led to larging the Section s tasks to machine and system safety
