System-Theoretical Modelling in Surface Water Hydrology Alexander Lattermann, 2012-12-06 Modelling of hydrological rainfall runoff processes is facilitated by the application of the systemtheoretical approach to linear nonlinear and stochastic models To this purpose the variables involved in methods for determinating areal precipitation and baseflow separation are discussed The convolution theorem in the theory of linear systems and the mathematical transform technique Laplace Z transformation are used to identify characteristics of the watershed and simulate hydrological processes To support the calculation of model output functions computer programs are included in the text This volume is suitable as a text for hydrology courses at universities or engineering academies Statistical Modelling in Hydrology Robin T. Clarke, 1994-11-29 Emphasizes the interactive analysis of hydrological data made possible through the widespread availability of desktop computers Demonstrates new techniques for assessing the adequacy and performance of hydrological models Offers an in depth discussion of examples drawn from numerous applications such as the analysis of river flow extremes regionalization of flow characteristics infiltration of water into soil profiles overland flow studies and rainfall runoff modelling Advances in Data-based Approaches for Hydrologic Modeling and Forecasting Bellie Sivakumar, Ronny Berndtsson, 2010 This book comprehensively accounts the advances in data based approaches for hydrologic modeling and forecasting Eight major and most popular approaches are selected with a chapter for each stochastic methods parameter estimation techniques scaling and fractal methods remote sensing artificial neural networks evolutionary computing wavelets and nonlinear dynamics and chaos methods These approaches are chosen to address a wide range of hydrologic system characteristics processes and the associated problems Each of these eight approaches includes a comprehensive review of the fundamental concepts their applications in hydrology and a discussion on potential future directions Statistical Methods in Hydrology Canada. Inland Waters Branch, 1967 **Analysis of Water Resource Systems** L. Votrubá, 1988-09-01 Water resource systems research provides a basis for rational water management in large basins The design and operation of water resource systems are both the most complicated and the most important tasks of water management This book deals with the basic issues involved in the application of systems sciences to water management A survey of the systems sciences the general systems theory cybernetics systems engineering operations research and systems analysis is presented as well as the methods for water resource systems analysis and for water resource systems analysis and

for their evaluation The mathematical methods used in systems theory have been given detailed treatment Linear and dynamic programming have been used as models of optimal programming Since many practical tasks require the simulation models of water resource systems apart from their principles and a detailed description the simulation language for computing programming has been included Other methods of operations research and their application to water resource systems have been analysed and evaluated Some of these are models of inventory theory models of queuing theory graphs network analysis and some special methods like the out of kilter algorithm the chance constrained model and the chance constrained model combined with the simulation model One chapter is devoted to information and information systems in water management The final part of the book deals with prospects for water resource systems development The book is intended for engineers and decision makers involved in projects operation and research However it can be used by students in high schools technical universities and by graduate students It will serve as an up to date source of information about the principles and methodology of water resource analysis and design
