The History of the GPU - New Developments Jon Peddie, 2023-01-01 This third book in the three part series on the History of the GPU covers the second to sixth eras of the GPU which can be found in anything that has a display or screen The GPU is now part of supercomputers PCs Smartphones and tablets wearables game consoles and handhelds TVs and every type of vehicle including boats and planes In the early 2000s the number of GPU suppliers consolidated to three whereas now the number has expanded to almost 20 In 2022 the GPU market was worth over 250 billion with over 2.2 billion GPUs being sold just in PCs and more than 10 billion in smartphones Understanding the power and history of these devices is not only a fascinating tale but one that will aid your understanding of some of the developments in consumer electronics computers new automobiles and your fitness watch

GPU Computing Gems Jade Edition, 2011-11-02 GPU Computing Gems Jade Edition offers hands on proven techniques for general purpose GPU programming based on the successful application experiences of leading researchers and developers One of few resources available that distills the best practices of the community of CUDA programmers this second edition contains 100% new material of interest across industry including finance medicine imaging engineering gaming environmental science and green computing It covers new tools and frameworks for productive GPU computing application development and provides immediate benefit to researchers developing improved programming environments for GPUs Divided into five sections this book explains how GPU execution is achieved with algorithm implementation techniques and approaches to data structure layout More specifically it considers three general requirements high level of parallelism coherent memory access by threads within warps and coherent control flow within warps Chapters explore topics such as accelerating database searches how to leverage the Fermi GPU architecture to further accelerate prefix operations and GPU implementation of hash tables There are also discussions on the state of GPU computing in interactive physics and artificial intelligence programming tools and techniques for GPU computing and the edge and node parallelism approach for computing graph centrality metrics In addition the book proposes an alternative approach that balances computation regardless of node degree variance Software engineers programmers hardware engineers and advanced students will find this book extremely useful For useful source codes discussed throughout the book the editors invite readers to the following website This second volume of GPU Computing Gems offers 100% new material of interest across industry including finance medicine imaging engineering gaming environmental science green computing and more Covers new tools and frameworks for productive GPU computing application development and offers immediate benefit to researchers developing improved programming environments for GPUs Even more hands on proven techniques demonstrating how general purpose GPU computing is changing scientific research Distills the best practices of the community of CUDA programmers each chapter provides insights and ideas as well as hands on skills applicable to a variety of fields

High Performance Computing Thomas Sterling, Maciej Brodowicz, Matthew

Anderson,2024-09-19 Performance Computing Modern Systems and Practices is a fully comprehensive and easily accessible treatment of high performance computing covering fundamental concepts and essential knowledge while also providing key skills training With this book students will begin their careers with an understanding of possible directions for future research and development in HPC domain scientists will learn how to use supercomputers as a key tool in their quest for new knowledge and practicing engineers will discover how supercomputers can employ HPC systems and methods to the design and simulation of innovative products This new edition has been fully updated and has been reorganized and restructured to improve accessibility for undergraduate students while also adding trending content such as machine learning and a new chapter on CUDA Covers enabling technologies system architectures and operating systems parallel programming languages and algorithms scientific visualization correctness and performance debugging tools and methods GPU accelerators and big data problems Provides numerous examples that explore the basics of supercomputing while also providing practical training in the real use of high end computers Helps users with informative and practical examples that build knowledge and skills through incremental steps Features sidebars of background and context to present a live history and culture of this unique field

GPU Programming in MATLAB Nikolaos Ploskas,Nikolaos Samaras,2016-08-25 GPU programming in MATLAB is intended for scientists engineers or students who develop or maintain applications in MATLAB and would like to accelerate their codes using GPU programming without losing the many benefits of MATLAB The book starts with coverage of the Parallel Computing Toolbox and other MATLAB toolboxes for GPU computing which allow applications to be ported straightforwardly onto GPUs without extensive knowledge of GPU programming The next part covers built in GPU enabled features of MATLAB including options to leverage GPUs across multicore or different computer systems Finally advanced material includes CUDA code in MATLAB and optimizing existing GPU applications Throughout the book examples and source codes illustrate every concept so that readers can immediately apply them to their own development Provides in depth comprehensive coverage of GPUs with MATLAB including the parallel computing toolbox and built in features for other MATLAB toolboxes Explains how to accelerate computationally heavy applications in MATLAB without the need to re write them in another language Presents case studies illustrating key concepts across multiple fields Includes source code sample datasets and lecture slides

Dataquest ,2007 A Framework for Real-time 3D Reconstruction by Space Carving using Graphics Hardware Christian Nitschke,2012-03-02 Diploma Thesis from the year 2006 in the subject Communications Research Studies Enquiries grade 1 University of Weimar language English abstract Reconstruction of real world scenes from a set of multiple images is a topic in Computer Vision and 3D Computer Graphics with many interesting applications There exists a powerful algorithm for shape reconstruction from arbitrary viewpoints called Space Carving However it is computationally expensive and hence can not be used with applications in the field of 3D video or CSCW as well as interactive 3D model creation Attempts have been made to achieve real time framerates using PC cluster systems While

these provide enough performance they are also expensive and less flexible Approaches that use GPU hardware acceleration on single workstations achieve interactive framerates for novel view synthesis but do not provide an explicit volumetric representation of the whole scene The proposed approach shows the efforts in developing a GPU hardware accelerated framework for obtaining the volumetric photo hull of a dynamic 3D scene as seen from multiple calibrated cameras High performance is achieved by employing a shape from silhouette technique in advance to obtain a tight initial volume for Space Carving Also several speed up techniques are presented to increase efficiency Since the entire processing is done on a single PC the framework can be applied to mobile setups enabling a wide range of further applications The approach is explained using programmable vertex and fragment processors with current hardware and compared to highly optimized CPU implementations It is shown that the new approach can outperform the latter by more than one magnitude The downloadable introduction has been written specifically for this offer Its contents are only a subset of the real introductory chapter of the thesis
