Winner of the Engineer Historian Award from the International History and Heritage Committee of the American Society of Mechanical Engineers and the Nicholas Joseph Cugnot Award given by the Society of Automotive Historians Recent attention to hybrid cars that run on both gasoline and electric batteries has made the electric car an apparent alternative to the internal combustion engine and its attendant environmental costs and geopolitical implications Few people realize that the electric car neither a recent invention nor a historical curiosity has a story as old as that of the gasoline powered automobile and that at one time many in the nascent automobile industry believed battery powered engines would become the dominant technology In both Europe and America electric cars and trucks succeeded in meeting the needs of a wide range of consumers Before World War II as many as 30 000 electric cars and more than 10 000 electric trucks plied American roads European cities were busy with electrically propelled fire engines taxis delivery vans buses heavy trucks and private cars Even so throughout the century long history of electric propulsion the widespread conviction it was an inferior technology

remained stubbornly in place an assumption mirrored in popular and scholarly memory In *The Electric Vehicle* Gijs Mom challenges this view arguing that at the beginning of the automobile age neither the internal combustion engine nor the battery powered vehicle enjoyed a clear advantage He explores the technology and marketing consumer ratio faction relationship over four generations of electric vehicle design with separate chapters on privately owned passenger cars and commercial vehicles Mom makes comparisons among European countries and between Europe and America He finds that the electric vehicle offered many advantages among them greater reliability and control less noise and pollution He also argues that a nexus of factors cultural underpowered and less rugged electric cars seemed feminine at a time when most car buyers were men structural the shortcomings of battery technology at the time and systemic the infrastructural problems of changing large numbers of batteries ultimately gave an edge to the internal combustion engine One hopes as a new generation of electric vehicles becomes a reality *The Electric Vehicle* offers a long overdue reassessment of the place of this technology in the history of street transportation

Electric and Hybrid Vehicles Gianfranco Pistoia, 2010-07-27 *Electric and Hybrid Vehicles Power Sources Models Sustainability Infrastructure and the Market* reviews the performance cost safety and sustainability of battery systems for hybrid electric vehicles HEVs and electric vehicles EVs including nickel metal hydride batteries and Li ion batteries Throughout this book especially in the first chapters alternative vehicles with different power trains are compared in terms of lifetime cost fuel consumption and environmental impact The emissions of greenhouse gases are particularly dealt with The improvement of the battery or fuel cell performance and governmental incentives will play a fundamental role in determining how far and how substantial alternative vehicles will penetrate into the market An adequate recharging infrastructure is of paramount importance for the diffusion of vehicles powered by batteries and fuel cells as it may contribute to overcome the so called range anxiety Thus proposed battery charging techniques are summarized and hydrogen refueling stations are described The final chapter reviews the state of the art of the current models of hybrid and electric vehicles along with the powertrain solutions adopted by the major automakers Contributions from the worlds leading industry and research experts Executive summaries of specific case studies Information on basic research and application approaches
