**Approximation and Online Algorithms** Marcin Bieńkowski, Matthias Englert, 2025-02-11 This book constitutes the refereed proceedings of the 22nd International Workshop on Approximation and Online Algorithms WAOA 2024 held in Egham UK during September 5-6, 2024. The 15 full papers included in this book were carefully reviewed and selected from 47 submissions. They were organized in topical sections as follows: algorithmic game theory, algorithmic trading, coloring and partitioning, competitive analysis, computational advertising, computational finance, cuts and connectivity, FPT approximation, algorithms, geometric problems, graph algorithms, inapproximability results, mechanism design, network design, packing and covering paradigms for designing and analyzing approximation and online algorithms, resource augmentation and scheduling problems.

**Approximation and Online Algorithms** Thomas Erlebach, Giuseppe Persiano, 2013-12-11 This book constitutes the thoroughly refereed post-workshop proceedings of the 10th International Workshop on Approximation and Online Algorithms WAOA 2012 held in Ljubljana, Slovenia, in September 2012, as part of the ALGO 2012 conference event. The 22 revised full papers presented together with invited talks were carefully reviewed and selected from 60 submissions. The workshop covered areas such as geometric problems, online algorithms, scheduling, algorithmic game theory, and approximation algorithms.

**Online Optimization of Large Scale Systems** Martin Grötschel, Sven O. Krumke, Joerg Rambau, 2013-03-14 In its thousands of years of history, mathematics has made an extraordinary career. It started from rules for bookkeeping and computation of areas to become the language of science. Its potential for decision support was fully recognized in the twentieth century, only vitally aided by the evolution of computing and communication technology. Mathematical optimization, in particular, has developed into a powerful machinery to help planners. Whether costs are to be reduced, profits to be maximized, or scarce resources to be used wisely, optimization methods are available to guide decision making. Optimization is particularly strong if precise models of real phenomena and data of high quality are at hand, often yielding reliable automated control and decision procedures. But what if the models are soft and not all data are around? Can mathematics help as well? This book addresses such issues, e.g., problems of the following type: An elevator cannot know all transportation requests in advance. In which order should it serve the passengers? Wing profiles of aircrafts influence the fuel consumption. Is it possible to continuously adapt the shape of a wing during the flight under rapidly changing conditions? Robots are designed to accomplish specific tasks as efficiently as possible. But what if a robot navigates in an unknown environment? Energy demand changes quickly and is not easily predictable over time. Some types of power plants can only react slowly.
