Building Engineering Facing the Challenges of the 21st Century David Bienvenido-Huertas, Joaquín

Durán-Álvarez, 2023-07-24 Building engineering is a complex and constantly evolving branch. The needs of the XXI century society cause a constant change in construction industry due to the need to achieve sustainable and ecological buildings. This affects all levels and phases of this engineering. Given this circumstance, numerous researchers turn their efforts to find optimal solutions for building engineering. For this reason, in this book, a holistic analysis of building engineering is carried out from the perspectives that have a greater weight for sustainability objectives. The book is divided into 6 sections: i Building materials, which deals with research related to the most innovative and sustainable building materials; ii Design and construction, which deals with existing methodologies and advances in design and construction in the construction sector; iii Building repair and maintenance, which deals with building repair, maintenance and upkeep techniques; iv Energy efficiency, which analyses the latest research on the energy efficiency of buildings and their behaviour in the face of climate change; v Sustainability, which analyses the establishment of measures to achieve a more sustainable built environment; and vi construction management, which compiles the latest studies in the field of Project manager. The 38 chapters of the book together constitute an advance for the topic of building engineering. The aspects covered in the book are of great interest to various sectors such as researchers, engineers, architects, legislators and interested parties. Architecture Performance Evaluation Methods Lieven Eeckhout, 2022-05-31 Performance evaluation is at the foundation of computer architecture research and development. Contemporary microprocessors are so complex that architects cannot design systems based on intuition and simple models only. Adequate performance evaluation methods are absolutely crucial to steer the research and development process in the right direction. However, rigorous performance evaluation is non-trivial as there are multiple aspects to performance evaluation such as picking workloads, selecting an appropriate modeling or simulation approach, running the model and interpreting the results using meaningful metrics. Each of these aspects is equally important and a performance evaluation method that lacks rigor in any of these crucial aspects may lead to inaccurate performance data and may drive research and development in a wrong direction. The goal of this book is to present an overview of the current state of the art in computer architecture performance evaluation with a special emphasis on methods for exploring processor architectures. The book focuses on fundamental concepts and ideas for obtaining

accurate performance data The book covers various topics in performance evaluation ranging from performance metrics to workload selection to various modeling approaches including mechanistic and empirical modeling And because simulation is by far the most prevalent modeling technique more than half the book's content is devoted to simulation The book provides an overview of the simulation techniques in the computer designer's toolbox followed by various simulation acceleration techniques including sampled simulation statistical simulation parallel simulation and hardware accelerated simulation Table of Contents Introduction Performance Metrics Workload Design Analytical Performance Modeling Simulation Sampled Simulation Statistical Simulation Parallel Simulation and Hardware Acceleration Concluding Remarks Digital Forensics
