Lelas, 2001-11-30 Science is a multifaceted natural and historical phenomenon It consists of five elements that is it happens in five distinct media biological linguistic technological social and historical None of these alone provides an indubitable basis for the truth of scientific knowledge but combined together they compose a solid ground for our trust in its reliability The composition however is uniquely related to our modern mode of living Science did not exist before modernity and it will cease to exist in this form if our way of life should change The book presents a thorough analysis of all these dimensions and their relations and thus lays the path for an integral theory of science Because of this it can be used as a textbook for general courses in the theory of science at both the undergraduate and graduate level

Given their commonality of interests and shared appreciation of the values of conceptual clarity and argumentative rigour it is particularly appropriate that there should be engagement between the main English language tradition and the philosophy of Aquinas and more broadly of Thomism The essays in this collection range widely across the fields of metaphysics epistemology philosophy of mind and action and theory of value with most linking analytical and Aristotelian Thomistic ideas and some focusing on Aquinas in particular This collection is distinctive in content and unusual in North American publishing in the areas of medieval philosophy scholasticism and Thomism in that the majority of the contributors are based in Europe many at medieval universities in which scholasticism had a historical presence and in some cases a prominent and distinguished one Mind Metaphysics and Value brings together the interests knowledge and expertise of a wide range of scholars to form a broad and exciting intellectual community     Science Fair Project Index 1973-1980 Akron-Summit County Public Library.
