and expert systems first try to define the problem and then choose the best solution from the domain of possible solutions. These days several CAD technologies such as Synopsys and Mentor Graphics are specifically created to increase the automation of VLSI design. When a task is completed using the appropriate tool, each stage of the task design produces outcomes that are more productive than typical. However, combining all of these tools into a single package offer has drawbacks. We can't really use every outlook without sacrificing the efficiency and usefulness of our output. The researchers decided to include AI approaches into VLSI design automation in order to get around these obstacles. AI is one of the fastest growing tools in the world of technology and innovation that helps to make computers more reliable and easy to use. Artificial Intelligence in VLSI design has provided high end and more feasible solutions to the difficulties faced by the VLSI industry. Physical design, RTL design, STA etc are some of the most in demand courses to enter the VLSI industry. These courses help develop a better understanding of the many tools like Synopsis.
