Tonniessen, 1991 *Rice Biotechnology and Genetic Engineering* Paul Christou, 2020-10-14 Rice represents a unique opportunity for improvement through genetic engineering This new book provides a detailed review of past and present developments in the genetic engineering of rice as well as an informed examination of current genetic engineering material and methods *Rice Biotechnology* Jamie A. Goode, Derek J. Chadwick, 2008-04-30 Rice is the most important food crop for half the world's population Over the last three decades the improvement in human nutrition and health in Asia has largely been attributable to a relatively stable and affordable rice supply The challenge to produce enough rice for the future however remains daunting as the current rate of population growth outpaces that of increases in rice production Science has a central role to play in raising rice productivity and this book highlights areas of plant science that are particularly relevant to solving the major constraints on rice production Examining molecular genetic and cellular techniques it considers recent advances in four research approaches for increasing yields and improving the nutritional quality of rice Plant genomics knowing the identity and location of each gene in the rice genome is of immense value in all aspects of rice science and cultivar improvement Molecular biological approaches to increase yield to produce more biomass by increasing photosynthetic rate and duration and by improving grain filling Enhancing tolerance to biotic and abiotic stresses with new DNA array technologies it is now possible to assess global genomic response to stresses Understanding the relationships among stress pathways may create new opportunities for gene manipulation to enhance tolerance to multiple biotic and abiotic stresses Improving nutritional quality in the grain knowledge of the biosynthesis of micronutrients in plants permits genetic engineering of metabolic pathways to enhance the availability of micronutrients **Regenerative Agriculture for Sustainable Food Systems** Sandeep Kumar, Ram Swaroop Meena, Parvender Sheoran, Manoj Kumar Jhariya, 2024-10-24 This book aims to present a comprehensive collection of information that combines improved soil and crop productivity climate based stress management enhanced research infrastructure financial assistance for regenerative technologies and government subsidies and economic incentives Considering the importance of soil biodiversity health and ecological balance this book primarily focuses on effective plans and policies for soil management and restoration in agricultural soils The book covers key areas such as advancing communication strategies to ensure subsidies and incentives for carbon sequestering farm practices and effectively publicizing the benefits of soil carbon health and regenerative practices It also includes the declaration of rules and regulations to guide policies programs and investments in green technologies for soil restoration and ecosystem services and forming a robust virtual network among farmers land managers and their associations to prepare action plans and seek available funding for regenerative farm practices and technologies Additionally it promotes research and developmental activities on carbonaceous practices and land use decisions across various agro ecological regions and soil types The central
