plastics industry the title *Developments in Plastics Technology* now covers an incredibly wide range of subjects or topics No single volume can survey the whole field in any depth and so what follows is therefore a series of chapters on selected topics The topics were selected by us the editors because of their immediate relevance to the plastics industry When one considers the materials produced and used by the modern plastics industry there is a tendency to think of the commodity thermoplastics such as poly vinyl chloride or polyethylene the thermosetting materials are largely ignored Because of this attitude we are very pleased to include in this volume a chapter which deals with the processing of a thermosetting material i e the pultrusion of glass reinforced polyester The extrusion of plastics is of course a very important subject but an aspect which is often overlooked is the need to remove volatile matter during processing for this reason we have included a chapter on devolatilisation Current industrial practice is towards materials modification and this attitude is reflected in the chapters on the transformation of ethylene vinyl acetate polymers and the use of wollastonite in two important thermoplastics When assessing the performance of materials there is a tendency to concentrate on short term mechanical tests and ignore such topics as fatigue and longer term testing We are therefore very pleased to include a chapter on this subject *Annual Connectors and Interconnection Technology Symposium Proceedings*, 1982 *Plastics Industry 4.0* Christian Hopmann, Mauritius Schmitz, 2020-12-07 *Plastics Industry 4 0* provides a sophisticated insight into the development of the plastics industry in terms of digitalization and Industry 4 0 i e the Fourth Industrial Revolution The background to these increasingly important topics is discussed along with provision of the prerequisite knowledge regarding process complexity and modeling as well as data acquisition to build the foundation of data driven digital processes Furthermore the facets of so called cyber physical systems including their key components and interfaces are discussed and illustrated using industrial application as well as scientific use cases Aimed at decision makers in the plastics industry engineers in industry including those in R D and process and product development as well as researchers and students in universities this book provides the inspiration to connect with *Plastics Industry 4 0* and thereby stimulate innovation in companies processes products and research Contents Introduction Potentials Benefits and Challenges for Successful Implementation of Industry 4 0 Data Acquisition and Process Monitoring as Enabler for Industry 4 0 Cyber Physical Systems Models and Artificial Intelligence Global Connectivity Digital Engineering Complex Value Chain Assistant Systems **The Year Book of Technical Education and Training for Industry**, 1969 *Polymer Process Engineering '99* Phil D. Coates, 1999 Proceedings of an international conference held in June 1999 which was designed to address the issues Where is polymer processing going and What are the key trends in technology at the end of the 20th century in this vital international industry Papers cover leading edge developments in polymer processing technology in process measurements and process flow modelling and control **Plastics technology 2001**, 2001 *Flight*, 1960
