Toll-Like Receptor Activation in Immunity vs. Tolerance Christophe M. Filippi, 2016-01-12 The innate immune system has evolved means to recognize and react suitably to foreign entities such as infectious agents. In many cases, infectious microorganisms threaten the integrity and function of the target organs or tissues; therefore, consequent to their recognition, the immune system becomes activated to ensure their elimination. Toll-like receptors (TLRs) constitute a family of receptors specialized in the recognition of molecular patterns typically associated with infectious agents. Different TLRs exist, each selective for molecular entities and motifs belonging to a specific pathogen group. Consequently, it is thought that the molecular nature of invading microorganisms activates specific TLRs to drive adequate anti-infectious immunity. For instance, nucleic acid-specific intracellular receptors TLR3, 7, 8, and 9 are used to sense viruses and drive antiviral immunity, while other receptors such as TLR2 and TLR4 recognize and promote immunity against bacteria, yeast, and fungi. Yet, it is becoming evident that activation of TLR pathways triggers mechanisms that not only stimulate but also regulate the immune system. For instance, TLR stimulation by viruses will drive antiviral interferon but also immunoregulatory cytokine production and regulatory T cell activation. Stimulation of TLRs by bacteria or using molecular agonists can also trigger both immune stimulatory and regulatory responses. TLR stimulation by infectious agents likely serves to activate but also control anti-infectious immunity for instance, prevent potential immunopathological tissue damage which can be caused by acute immune defense mechanisms. Previous work by us and others has shown that the immunoregulatory arm of TLR stimulation can additionally help control autoreactive processes in autoimmune disease. Hence, it is becoming established that gut commensals, which also play a crucial part in the control of autoimmune disease, establish immune regulatory mechanisms through activation of particular TLRs. In sum, it appears that TLRs are key immune players that not only stimulate but also regulate immune processes in health and disease. In this Research Topic, we wish to review the dual role of TLRs as activators and regulators of immune responses. We aim to motivate data-driven opinions as to the importance of context of TLR agonism for determining immune activation vs. regulation. The presentation of ongoing original works as well as data and opinions around other innate immune receptors pertaining to this topic are also encouraged.

Public Health Data Challenges of the COVID-19 Pandemic Carla Sofia e Sá Farinha, Paulo Jorge Nogueira, Andreia Silva Costa, 2022-08-26

Current Progress and Challenges in the Development of a Hepatitis C Virus Vaccine Steven K.H. Fong, Thomas F. Baumert, 2019-01-22 More than 70 million people worldwide are infected with hepatitis C virus, a major cause of liver cirrhosis, liver failure, and hepatocellular carcinoma worldwide. In the last decade, this cancer has emerged as the second leading cause of cancer death, and the global burden is increasing by two million new infections per year, mainly due to injection drug use. An effective vaccine will be the most effective means to contain the spread of this virus worldwide. The articles in this Research Topic describe the progress that has been made towards a preventive vaccine and the challenges that still need to be overcome to ultimately achieve this.

goal **Filtration and Purification in the Biopharmaceutical Industry, Third Edition** Maik W. Jornitz, 2019-06-26

Since sterile filtration and purification steps are becoming more prevalent and critical within medicinal drug manufacturing the third edition of *Filtration and Purification in the Biopharmaceutical Industry* greatly expands its focus with extensive new material on the critical role of purification and advances in filtration science and technology. It provides state of the science information on all aspects of bioprocessing including the current methods, processes, technologies and equipment. It also covers industry standards and regulatory requirements for the pharmaceutical and biopharmaceutical industries. The book is an essential comprehensive source for all involved in filtration and purification practices, training and compliance. It describes such technologies as viral retentive filters, membrane chromatography, downstream processing, cell harvesting and sterile filtration. Features: Addresses recent biotechnology related processes and advanced technologies such as viral retentive filters, membrane chromatography, downstream processing, cell harvesting and sterile filtration of medium, buffer and end product. Presents detailed updates on the latest FDA and EMA regulatory requirements involving filtration and purification practices as well as discussions on best practices in filter integrity testing. Describes current industry quality standards and validation requirements and provides guidance for compliance not just from an end user perspective but also supplier requirement. It discusses the advantages of single use process technologies and the qualification needs. Sterilizing grade filtration qualification and process validation is presented in detail to gain the understanding of the regulatory needs. The book has been compiled by highly experienced contributors in the field of pharmaceutical and biopharmaceutical processing. Each specific topic has been thoroughly examined by a subject matter expert. Genetic Engineering News, 2005 **Emerging**

Robertson, Parenteral Drug Association, 2004. Viral safety is a key issue for biological and biotechnological medicinal products. This first joint PDA/EMA European Virus Safety Forum brought together an international panel of speakers from the industry, regulatory authorities and research to present and discuss the most up to date scientific knowledge and regulatory aspects in the areas of virus safety of recombinant proteins, monoclonal antibodies, plasma derived medicinal products and advanced technology medicinal products. The conference provided the opportunity to discuss new approaches in viral safety such as generic or matrix validation of virus removal and novel virus inactivation/removal technologies and to clarify their benefits and applicability for specific product categories or technologies. This volume will further the discussion on virus safety, contribute to the development of new regulatory guidance and support harmonisation of the regulations in this field.

Modelling and Control in Biomedical Systems Claudio Cobelli, L. Mariani, 1989. Hardbound. This volume provides a complete and up to date review of the recent developments and trends relating to modelling and control in biomedical
