**The Internet of Women - Accelerating Culture Change** Nada Anid, Monique J. Morrow, Laurie Cantileno, 2022-09-01

Female scientists, technologists, engineers, and mathematicians worldwide are making historic contributions to their fields. The modern workforce is closer to gender equal than it has ever been, and many efforts are in place to support further progress. The Internet of Women provides an exciting look at personal narratives and case studies of female leaders and cultural shifts around the globe that illustrate this promising trend. From the United Nations' emphasis on girls and technology education in the SDGs (Sustainable Development Goals) to the increased female labor force in Zambia, a policy change that was inspired by the MDGs (UN Millennium Development Goals), The Internet of Women captures stunning examples of progress from around the world and men working hand in hand with women advocating for cultural change. Scholars and practitioners lament the lack of women leading and working in leading organizations in the technology industry. Gender equality and female participation in the tech field is critical to both developing and developed economies; nevertheless, this gap remains a global phenomenon. The lack of female leadership is particularly extreme at the highest echelons of leading technology organizations. Few publicly traded tech companies have female CEOs; in fact, most nations have zero female leadership in the tech industry. This gap does indicate a slow pace of progress for gender equality in tech employment. Women's pay still lags nearly a decade behind according to the World Economic Forum, meaning that women's on average pay today is the equivalent to that of similarly qualified and similarly employed men in 2006. Without significant progress, the current rate of change will not lead to parity for 118 years according to the World Economic Forum (WEF). However, there's significant work being done to shift this tide. Take for instance Michelle Lee, the first female Under Secretary of Commerce for Intellectual Property and Director of the United States Patent and Trademark Office (USPTO). She reflects on her childhood Girl Scout badge in sewing and cooking and how that memory inspired her to create an IP badge that exposes young women to the process of invention. Social entrepreneur, investor, and Malala Fund co-founder Shiza Shahid shares her efforts beginning from mentoring young women in Pakistan to her current work directing more investment to women innovators around the globe. And Elizabeth Isele, a senior fellow in Social Innovation at Babson College, shares her research on women and ageism, saying we need to retire the word retirement. The book is divided into six parts, each with unique areas of focus: Millennials Leading, Exploring Challenges and Opportunities Facing the Next Generation of Women in Technology, Men and Women Empowering One Another, Bold Leadership, Women Changing the Culture of Investment and Entrepreneurship, Educating for the 21st Century, Breaking the Glass Ceiling, A Generation of Women Forging into Technology Leadership, Emerging Fields of Technology. The Internet of Women gathers examples about the increasingly inclusive and progressive gender culture in technology from over 30 countries. Stories range from an entrepreneur in Dubai partnering with private and public sector entities to accelerate blockchain technology to a young British woman moving to Silicon Valley to launch an artificial intelligence platform and

incubator The book is intended for corporations academic institutions the private sector government agencies gender experts and the general public and its key benefit is to let the reader understand a path towards implementing diversity overall globally It also showcases the strategies tools and tactical execution on how create cultural change in all parts of the world

*Becoming Scientists* Rusty Bresser, Sharon Fargason, 2023-10-10 Most important to being a good science teacher is holding the expectation that all students can be scientists and think critically Providing a thinking curriculum is especially important for those children in diverse classrooms who have been underserved by our educational system *Becoming Scientists* Good science starts with a question perhaps from the teacher at the start of a science unit or from the children as they wonder what makes a toy car move how food decomposes or why leaves change color Using inquiry science children discover answers to their questions in the same way that scientists do they design experiments make predictions observe and describe offer and test explanations and share their conjectures with others In essence they construct their own understanding of how the world works through experimentation reflection and discussion Look into real classrooms where teachers practice inquiry science and engage students in the science and engineering practices outlined in the Next Generation Science Standards Rusty Bresser and Sharon Fargason show teachers how to do the following Build on students varied experiences background knowledge and readiness Respond to the needs of students with varying levels of English language proficiency Manage a diverse classroom during inquiry science exploration Facilitate science discussions Deepen their own science content knowledge As the authors state Inquiry science has little to do with textbooks and lectures and everything to do with our inherent need as a species to learn about and reflect on the world around us Join your students on a journey of discovery as you explore your world via inquiry Mathematics and Science Across the Curriculum , 2002

Beyond the Science Kit Wendy Saul, Jeanne Reardon, 1996 The goal of Wendy Saul and Jeanne Reardon s book is not to dispense with kits rather to encourage teachers and their students to see kits as just a beginning to real scientific inquiry The essays in this volume reveal how elementary teachers have turned around their teaching to make themselves and their students producers as well as consumers of science knowledge Physics Education and Gender Allison J. Gonsalves, Anna T. Danielsson, 2020-04-24 This Edited Volume engages with concepts of gender and identity as they are mobilized in research to understand the experiences of learners teachers and practitioners of physics The focus of this collection is on extending theoretical understandings of identity as a means to explore the construction of gender in physics education research This collection expands an understanding of gendered participation in physics from a binary gender deficit model to a more complex understanding of gender as performative and intersectional with other social locations e g race class LGBT status ability etc This volume contributes to a growing scholarship using sociocultural frameworks to understand learning and participation in physics and that seeks to challenge dominant understandings of who does physics and what counts as physics competence Studying gender in physics education research from a perspective of identity and identity construction allows us

to understand participation in physics cultures in new ways We are able to see how identities shape and are shaped by inclusion and exclusion in physics practices discourses that dominate physics cultures and actions that maintain or challenge structures of dominance and subordination in physics education The chapters offered in this book focus on understanding identity and its usefulness in various contexts with various learner or practitioner populations This scholarship collectively presents us with a broad picture of the complexity inherent in doing physics and doing gender Kit-kat ,1896 Linking Science & Literacy in the K-8 Classroom Rowena Douglas,2006
