Physical Combinatorics Progress In Mathematics:

Representations of Quantum Algebras and Combinatorics of Young Tableaux Susumu Ariki, 2002 This book contains most of the nonstandard material necessary to get acquainted with this new rapidly developing area It can be used as a good entry point into the study of representations of quantum groups Among several tools used in studying representations of quantum groups or quantum algebras are the notions of Kashiwara's crystal bases and Lusztig's canonical bases Mixing both approaches allows us to use a combinatorial approach to representations of quantum groups and to apply the theory to representations of Hecke algebras The primary goal of this book is to introduce the representation theory of quantum groups using quantum groups of type A_{r-1} as a main example The corresponding combinatorics developed by Misra and Miwa turns out to be the combinatorics of Young tableaux The second goal of this book is to explain the proof of the generalized Leclerc-Lascoux-Thibon conjecture This conjecture which is now a theorem is an important breakthrough in the modular representation theory of the Hecke algebras of classical type The book is suitable for graduate students and research mathematicians interested in representation theory of algebraic groups and quantum groups the theory of Hecke algebras algebraic combinatorics and related fields

Development of Solid Catalytic Materials Manfred Baerns, Martin Holeňa, 2009 The book provides a comprehensive treatment

of combinatorial development of heterogeneous catalysts In particular two computer aided approaches that have played a key role in combinatorial catalysis and high throughput experimentation during the last decade OCo evolutionary optimization and artificial neural networks OCo are described The book is unique in that it describes evolutionary optimization in a broader context of methods of searching for optimal catalytic materials including statistical design of experiments as well as presents neural networks in a broader context of data analysis It is the first book that demystifies the attractiveness of artificial neural networks explaining its rational fundamental OCo their universal approximation capability At the same time it shows the limitations of that capability and describes two methods for how it can be improved The book is also the first that presents two other important topics pertaining to evolutionary optimization and artificial neural networks automatic generating of problem tailored genetic algorithms and tuning evolutionary algorithms with neural networks Both are not only theoretically explained but also well illustrated through detailed case studies Sample Chapter s Chapter 1 Background of Combinatorial Catalyst Development 63 KB Contents Background of Combinatorial Catalyst Development M Baerns Approaches in the Development of Heterogeneous Catalysts M Baerns Mathematical Methods of Searching for Optimal Catalytic Materials M Holena Generating Problem Tailored Genetic Algorithms for Catalyst Search M Holena Analysis and Mining of Data Collected in Catalytic Experiments M Holena Artificial Neural Networks in the Development of Catalytic Materials M Holena Tuning Evolutionary Algorithms with Artificial Neural Networks M Holena Improving Neural Network Approximations M Holena Applications of Combinatorial Catalyst Development and An Outlook on Future Work M Baerns Readership Chemists and chemical engineers from academia and industry working in catalysis materials scientists graduate students dealing with catalytic chemistry interested in computer aided methods **Physical Combinatorics**

Masaki Kashiwara,Tetsuji Miwa,2000 This work is concerned with combinatorial aspects arising in the theory of exactly solvable models and representation theory Developments in integrable models reveal an unexpected link between representation theory and statistical mechanics through combinatorics For example Young tableaux which describe the basis of irreducible representations appear in the Bethe Ansatz method in quantum spin chains as labels for the eigenstates of Hamiltonians this text presents results and ideas from three viewpoints representation theory integrable models and combinatorics
