Physics and Politics Or Thoughts on the Application of the Principles of Natural Selection and Inheritance to Political Society- Walter Bagehot Walter Bagehot,2010-02-19 A passage from the book I do not supply it If we wanted to describe one of the most marked results perhaps the most marked result of late thought we should say that by it everything is made an antiquity When in former times our ancestors thought of an antiquarian they described him as occupied with coins and medals and Druids stones these were then the characteristic records of the decipherable past and it was with these that decipherers busied themselves But now there are other relics indeed all matter is become such Science tries to find in each bit of earth the record of the causes which made it precisely what it is those forces have left their trace she knows as much as the tact and hand of the artist left their mark on a classical gem It would be tedious and it is not in my way to reckon up the ingenious questionings by which geology has made part of the earth at least tell part of its tale and the answers would have been meaningless if physiology and conchology and a hundred similar sciences had not brought their aid Such subsidiary sciences are to the decipherer of the present day what old languages were to the antiquary of other days they construe for him the words which he discovers they give a richness and a truth like complexity to the picture which he paints even in cases where the particular detail they tell is not much

Panofsky on Physics, Politics, and Peace Wolfgang K.H. Panofsky,2007-08-06 This volume contains an unsystematic account of my past work it is not intended to be an autobiography in the conventional meaning of the term It is not even remotely a scholarly description of the momentous developments in which I was able to participate rather it is a recital of memorable episodes borrowing from the compulsory preface of a facetious British 1 history History is not what you thought It is what you can remember Thus this volume suffers from many sins of omission including full attribution of deserved credits but it is hoped only few sins of commission The author is greatly indebted to his colleagues and his wife Adele who kindly reviewed many segments of the manuscript describing shared experiences They are Sidney Drell Greg Loew Ed Lofgren Harvey Lynch Richard B Neal Richard Panofsky and Burt Richter But the author nonetheless is responsible for any errors Because of the multitude of topics into which I was drawn concurrently a strictly chronological account would prove unreadable Accordingly the book is divided into chapters each of which covers a limited period of engagement in a coherent subject matter an approach clearly again unsystematic but hopefully more conducive to conveying the substance of the work This account does not include a description of my family life

Physics and Politics Helmuth Trischler,Mark Walker,2010 Science with physics center stage and politics are two discrete but strongly intertwined parts of society The book discusses the complex relationship between politics especially the sharp political caesuras in 20th century German

history on the one hand and the manifold continuities in physics of the same period on the other hand A first set of articles frames the organizational systems and performative structures of funding and supporting research as part of the political subsystem of society A second set of comparative articles tackles regions and countries which are usually not in the focus of historians of science the Ukraine Japan and China The volume results from the research program on the history of the Deutsche Forschungsgemeinschaft from 1920 to 1970 and seeks to place the history of the DFG into international contexts

Physics and Politics Walter Bagehot,2021-04-27 One peculiarity of this age is the sudden acquisition of much physical knowledge There is scarcely a department of science or art which is the same or at all the same as it was fifty years ago A new world of inventions of railways and of telegraphs has grown up around us which we cannot help seeing a new world of ideas is in the air and affects us though we do not see it A full estimate of these effects would require a great book and I am sure I could not write it but I think I may usefully in a few papers show how upon one or two great points the new ideas are modifying two old sciences politics and political economy Even upon these points my ideas must be incomplete for the subject is novel but at any rate I may suggest some conclusions and so show what is requisite even if I do not supply it
