## **Physiology Of Fish In Intensive Culture Systems:**

Physiology of Fish in Intensive Culture Systems Gary Wedemeyer, 1996-09-30 Fish culture in hatcheries and other aquacultural facilities is becoming much more intensive all over the world The success of all kinds of fish rearing depends on the quality of management and this depends in turn on understanding the biology of fishes and the aquatic environment in which they live This book directly addresses the relationship between the aquatic environment and the fishes An understanding of this by the reader will result in a reduction of disease outbreaks through improved management

*The Progressive Fish Culturist* U.S. Fish and Wildlife Service, 1997      Encyclopedia of Fish Physiology , 2011-06-01 Fish form an extremely diverse group of vertebrates At a conservative estimate at least 40% of the world's vertebrates are fish On the one hand they are united by their adaptations to an aquatic environment and on the other they show a variety of adaptations to differing environmental conditions often to extremes of temperature salinity oxygen level and water chemistry They exhibit an array of behavioural and reproductive systems Interesting in their own right this suite of adaptive physiologies provides many model systems for both comparative vertebrate and human physiologists This four volume encyclopedia covers the diversity of fish physiology in over 300 articles and provides entry level information for students and summary overviews for researchers alike Broadly organised into four themes articles cover Functional Thematic and Phylogenetic Physiology and Fish Genomics Functional articles address the traditional aspects of fish physiology that are common to all areas of vertebrate physiology including Reproduction Respiration Neural Sensory Central Effector Endocrinology Renal Cardiovascular Acid base Balance Osmoregulation Ionoregulation Digestion Metabolism Locomotion and so on Thematic Physiology articles are carefully selected and fewer in number They provide a level of integration that goes beyond the coverage in the Functional Physiology topics and include discussions of Toxicology Air breathing Migrations Temperature Endothermy etc Phylogenetic Physiology articles bring together information that bridges the physiology of certain groupings

of fishes where the knowledge base has a sufficient depth and breadth and include articles on Ancient Fishes Tunas Sharks etc Genomics articles describe the underlying genetic component of fish physiology and high light their suitability and use as model organisms for the study of disease stress and physiological adaptations and reactions to external conditions Winner of a 2011 PROSE Award Honorable Mention for Multivolume Science Reference from the Association of American Publishers The definitive encyclopedia for the field of fish physiology Three volumes which comprehensively cover the entire field in over 300 entries written by experts Detailed coverage of basic functional physiology of fishes physiological themes in fish biology and comparative physiology amongst taxonomic Groups Describes the genomic bases of fish physiology and biology and the use of fish as model organisms in human physiological research Includes a glossary of terms

**Intensive culture of common carp (Cyprinus carpio). An experimental analysis** Biplov Shrestha, Saurav Lamichhane, 2021-09-22 Bachelor Thesis from the year 2020 in the subject Biology Zoology grade 3 87 course Bachelor of Science in Fisheries language English abstract In this study intensive common carp *Cyprinus carpio* culture was conducted from 2nd October to 28th October in experimental cemented tank of 25 m<sup>2</sup> of Fish hatchery complex AFU to learn to produce common carp through intensive culture Intensive culture is a system where fish are culture in a well managed manner and this system includes small ponds tanks and raceways with very high stocking density In this system fish is almost completely fed on formulated feed and good management is undertaken for controlling all aspects which require proper growth Production of common carp is increasing so intensification of its production from extensive to semi intensive and intensive aquaculture systems is a new trend The stocking density was 250 fish at the rate of 10 fish m<sup>2</sup> Average body weight of 27 9 9 8 g fish were stocked in the tank and feeding was done at 3% of body weight Feed was made from mustard oil cake 70% and rice bran 30% a feeding tray having an area of 50x50 cm<sup>2</sup> was used for feeding Sampling was performed at a ten days interval and feeding was adjusted accordingly The average temperature DO and pH of the culture tank of 5 30 am and 3pm was 28 7 0 9 and 30 2 1 2 C 7 1 1 3 and 12 4 1 6 mg L 7 7 and 7 8 respectively which were within the suitable range for culturing After harvesting the total harvested weight of fish was 12 9 kg while total stocking weight was 7 4 kg Mean harvest weight of fish was 54 4 28 6 g while mean stocking weight was 27 9 9 8 g The survival rate of fish was 97 6% The extrapolated GFY and NFY obtained was 72 6 and 30 8 t ha year respectively The fish were handed over to Aquaculture farm AFU which they will rear further in tanks and ponds During culturing water was exchanged daily in the morning for maintaining proper water quality Thus the results suggested that common carp intensive farming is feasible in cemented tanks with good survival rate
