

We only have one nervous system, but, because of its complexity, it is difficult to consider all of its parts at the same time; so, to simplify its study, we divide it in terms of its structures (structural classification) or in terms of its activities (functional classification).

Structural Classification

The structural classification, which includes all the nervous system organs, has two subdivisions- the central nervous system and the peripheral nervous system.

- **Central nervous system (CNS).** The CNS consists of the brain and spinal cord, which occupy the dorsal body cavity and act as the integrating and command centers of the nervous system.
- **Peripheral nervous system (PNS).** The PNS, the part of the nervous system outside the CNS, consists mainly of the nerves that extend from the brain and spinal cord.
