Quasiprojective Moduli For Polarized Manifolds:

Quasi-projective Moduli for Polarized Manifolds Eckart Viehweg, 2012-12-06 The concept of moduli goes back to B Riemann who shows in 68 that the isomorphism class of a Riemann surface of genus $g \geq 2$ depends on $3g - 3$ parameters which he proposes to name moduli A precise formulation of global moduli problems in algebraic geometry the definition of moduli schemes or of algebraic moduli spaces for curves and for certain higher dimensional manifolds have only been given recently A Grothendieck D Mumford see 59 as well as solutions in some cases It is the aim of this monograph to present methods which allow over a field of characteristic zero to construct certain moduli schemes together with an ample sheaf Our main source of inspiration is D Mumford's Geometric Invariant Theory We will recall the necessary tools from his book 59 and prove the Hilbert Mumford Criterion and some modified version for the stability of points under group actions As in 78 a careful study of positivity properties of direct image sheaves allows to use this criterion to construct moduli as quasi projective schemes for canonically polarized manifolds and for polarized manifolds with a semi ample canonical sheaf

Deutsche Nationalbibliographie und Bibliographie der im Ausland erschienenen deutschsprachigen Veröffentlichungen, 1995 **ICM-90 Satellite Conference Proceedings** Akira Fujiki, Kazuya Kato, Toshiyuki Katsura, Yujiro Kawamata, Yoichi Miyaoka, 2012-12-06 The International Conference Algebraic Geometry and Analytic Geometry Tokyo 1990 was held at Tokyo Metropolitan University and the Tokyo Training Center of Daihyaku Mutual Life Insurance Co from August 13 through August 17 1990 under the co sponsorship of the Mathematical Society of Japan It was one of the satellite conferences of ICM90 Kyoto and approximately 300 participants including more than 100 from overseas attended the conference The academic program was divided into two parts the morning sessions and the afternoon sessions The morning sessions were held at Tokyo Metropolitan University and two one hour plenary lectures were delivered every day The afternoon sessions at the Tokyo Training Center intended for a more specialized audience consisted of four separate subsessions Arithmetic Geometry Algebraic Geometry Analytic Geometry I and Analytic Geometry II This book contains papers which grew out of the talks at the conference The committee in charge of the organization and program consisted of A Fujiki K Kato T Katsura Y Kawamata Y Miyaoka S Mori K Saito N Sasakura T Suwa and K Watanabe We would like to take this opportunity to thank the many mathematicians and students who cooperated to make the conference possible especially Professors T Fukui S Ishii Y Kitaoka M Miyanishi Y Namikawa T Oda F Sakai and T Shioda for their valuable advice and assistance in organizing this conference Financial support was mainly provided by personal contributions from Professors M Proceedings of the International Conference on Algebra Dedicated to the Memory of A. Complex Geometry Ingrid Bauer, F. Catanese, Y. Kawamata, Thomas Peternell, Y.-T. Siu, 2011-06-28 This volume contains a collection of research papers dedicated to Hans Grauert on the occasion of his seventieth birthday Hans Grauert is a pioneer in modern complex analysis continuing the illustrious German tradition in function theory of several complex variables of

Weierstrass Behnke Thullen Stein Siegel and many others When Grauert came on the scene in the early 1950 s function theory was going through a revolutionary period with the geometric theory of complex spaces still in its embryonic stage A rich theory evolved with the joint efforts of many great mathematicians including Oka Kodaira Cartan and Serre The Cartan Seminar in Paris and the Kodaira Seminar provided important venues and for its development Grauert together with Andreotti and Remmert took active part in the latter In his career he has nurtured a great number of his own doctoral students as well as other young mathematicians in his field from all over the world For a couple of decades his work blazed the trail and set the research agenda in several complex variables worldwide Among his many fundamentally important contributions which are too numerous to completely enumerate here are 1 The complete clarification of various notions of complex spaces 2 The solution of the general Levi problem and his work on pseudo convexity for general manifolds 3 The theory of exceptional analytic sets 4 The Oka principle for holomorphic bundles 5 The proof of the Mordell conjecture for function fields 6 The direct image theorem for coherent sheaves

Classification of Algebraic Varieties Carel Faber, 2011 Fascinating and surprising developments are taking place in the classification of algebraic varieties The work of Hacon and McKernan and many others is causing a wave of breakthroughs in the minimal model program we now know that for a smooth projective variety the canonical ring is finitely generated These new results and methods are reshaping the field Inspired by this exciting progress the editors organized a meeting at Schiermonnikoog and invited leading experts to write papers about the recent developments The result is the present volume a lively testimony to the sudden advances that originate from these new ideas This volume will be of interest to a wide range of pure mathematicians but will appeal especially to algebraic and analytic geometers

Global Aspects of Complex Geometry Fabrizio Catanese, Hélène Esnault, Alan Huckleberry, Klaus Hulek, Thomas Peternell, 2006-09-29 This collection of surveys present an overview of recent developments in Complex Geometry Topics range from curve and surface theory through special varieties in higher dimensions moduli theory Kähler geometry and group actions to Hodge theory and characteristic p geometry Written by established experts this book will be a must for mathematicians working in Complex Geometry
