

# PHYSICAL PRINCIPLES **of REMOTE SENSING**

Third Edition

An abstract graphic featuring several overlapping, tilted rectangular panels that resemble satellite imagery or maps. The panels show various landscapes, including green fields, blue water bodies, and brownish terrain. The panels are layered in a way that creates a sense of depth and movement, with some panels appearing to be in the foreground and others receding into the background. The overall color palette is dominated by blues, greens, and browns, with some red and orange tones in the central overlapping area.

**Physical Principles of Remote Sensing** W. G. Rees, 2012-11-29 Fully updated and containing significant new material on photography laser profiling and image processing the third edition of this popular textbook covers a broad range of remote sensing applications and techniques across the Earth environmental and planetary sciences It focuses on physical principles giving students a deeper understanding of remote sensing systems and their possibilities while remaining accessible to those with less mathematical training by providing a step by step approach to quantitative topics Boxed examples additional photos and numerous colour images engage students and show them how the theory relates to the many real world applications Chapter summaries review questions and additional problems allow students to check their understanding of key concepts and practise handling real data for themselves Supplementary online material includes links to freely available software animations computer programs colour images and other web based resources of interest

**Physical Principles of Remote Sensing** E. L. Maxwell, 19?? *Fundamentals of Satellite Remote Sensing* Emilio Chuvieco, 2009-12-01 An extensive review of remote sensing principles with an emphasis on environmental applications Fundamentals of Satellite Remote Sensing discusses a wide range of topics from physical principles to data acquisition systems and on to visual and digital interpretation techniques The text focuses on the interpretation and analysis of remote sensing images and how they improve our understanding of environmental processes and their interaction with human activities The authors discuss new interpretation approaches including hyperspectral analysis high spatial resolution data and radiative transfer models The presentation includes an analysis of accuracy assessment methods and demonstrates how to integrate remote sensing results with geographic information systems It also covers recent missions such as Terra Aqua Envisat Ikonos Quickbird Geoeye and SPOT 5 as well as LIDAR and interferometric radar The discussion of visual criteria to extract interpretation from satellite images emphasizes differences and similarities with conventional photo interpretation techniques A chapter on accuracy assessment and the connection between remote sensing and geographic information systems helps readers extend the interpretation of satellite images to a more operational applications oriented framework
