we understand children's thought. Like all important problems, the nature of developing thinking is far from simple. A wide variety of different approaches have been taken to it, and in the few years before publication had come together to produce new understanding and new ideas. Originally published in 1983, each chapter in this book addresses itself to major issues in the area and the advances that were being made at the time.

web dec 15 2021 figure 1 a single phase induction motor stator produces a pulsating magnetic field rather than a rotating one as in a three phase motor this means there is no torque when the rotor is stationary once it is moving the currents induced in the rotor create a magnetic field that interacts with the pulsating field to produce a torque and thus
