*The Publishers' Trade List Annual*, 1992      **Boating**, 1990-07      *Boating*, 1991-07      **The Work Boat**, 1963      **The Graham Legacy** Michael E. Keller, 2003      **Flight**, 1960      **British Naval Weapons of World War Two** Norman Friedman, 2020-07-30 John Lambert was a renowned naval draughtsman whose plans were highly valued for their accuracy and detail by modelmakers and enthusiasts By the time of his death in 2016 he had produced over 850 sheets of drawings many of which have never been published These have now been acquired by Seaforth and this is the third of a planned series of albums on selected themes reproducing complete sheets at a large page size with an expert commentary and captioning The initial volumes concentrate on British naval weaponry used in the Second World War thus completing the project John Lambert was working on when he died His interest was always focused on smaller warships and his weapons drawings tend to be of open mountings the kind that present a real challenge to modelmakers rather than enclosed turret guns but he also produced drawings of torpedo tubes underwater weapons fire control directors and even some specific armament related deck fittings Following the earlier volumes on destroyer and escort armament this one covers the multitude of weapons carried by Coastal Forces many of which were improvised ad hoc or obsolescent but eventually leading to powerful purpose designed weaponry An appendix covers the main deck guns carried by British submarines of this era The drawings are backed by introductory essays by Norman Friedman an acknowledged authority on naval ordnance while a selection of photographs adds to the value of the book as visual reference Over time the series will be expanded to make this unique technical archive available in published form a move certain to be welcomed by warship modellers enthusiasts and the many fans of John Lambert's work      **Boating**, 2007-08      *British Motor Gun Boat 1939-45* Angus Konstam, 2013-03-20 Motor Gun Boats were the Spitfires of the Seas of the Royal Navy Bristling with small calibre guns and machine guns they served in a variety of roles during the War In the early war period they battled against German E boats in the English Channel then went on the offensive searching the enemy shore for targets of opportunity At other times they ran support for Motor Torpedo Boats and were used to deliver commandos on various raids Naval Warfare expert Angus Konstam tells the story of these small but destructive boats beginning with their design and development and carrying through to their operational use in both the European and Mediterranean theatres of World War II      **Society of Automotive Engineers [preprints]**, 1957      **Mercedes-AMG** Matt DeLorenzo, 2025-11-04 Mercedes AMG covers the full history of these German powerhouse cars from the early racing exploits of the 1960s to the iconic Hammer and Black Series cars to today's high performance Mercedes AMG models      **British Coastal Forces** Norman Friedman, 2023-04-30 The Royal Navy invented the fast motor torpedo boat during the First World War and used it and other small coastal craft to great effect during the Second This book tells the dramatic story of British coastal forces both offensive and defensive in both World Wars and beyond In the Second World War British coastal forces fought a desperate battle to control the narrow seas particularly the Channel and the North

Sea and took the war to the coasts of German occupied Europe fighting where larger warships could not be risked They also made a significant contribution to victory in the Mediterranean but it was primarily warfare in home waters that shaped wartime British Coastal Forces and left lessons for postwar development In this book Norman Friedman uniquely connects the technical story of the coastal craft and their weapons and other innovations with the way they fought In both world wars much of the technology was at the edge of what was feasible at the time Boats incorporated considerable British innovation and also benefited from important US contributions particularly in supplying high powered engines during World War II In contrast with larger warships British coastal forces craft were essentially shaped by a few builders and their part in the story is given full credit They also built a large number of broadly similar craft for air sea rescue and for completeness these are described in an appendix This fascinating dramatic story is also relevant to modern naval thinkers concerned with gaining or denying access to hostile shores The technology has changed but the underlying realities have not This book includes an extensive account of how coastal forces supported the biggest European example of seizing a defended shore the Normandy invasion That was by far the largest single British coastal forces operation demanding a wide range of innovations to make it possible Like other books in this series this one is based very heavily on contemporary official material much of which has not been used previously like the extensive reports of US naval observers who were allowed wide access to the Royal Navy as early as 1940 Combined with published memoirs these sources offer a much more complete picture than has previously appeared of how Coastal Forces fought and of the way in which various pressures both operational and industrial shaped them
