

Perspectives in Theories of Personality

Psychodynamic Theories - it focused on the importance of early childhood experience and on relationships with parents as guiding forces that shape personality development and sees the unconscious mind and motives as much more powerful than the conscious awareness.

Humanistic-Existential Theories - The primary assumption of the humanistic (currently known as "positive psychology") approach is that people strive toward meaning, growth, well-being, happiness, and psychological health.

Dispositional Theories - argue that the unique and long-term tendencies to behave in particular ways are the essence of our personality.

Biological-Evolutionary Theories - Behavior, thought, feelings, and personality are influenced by differences in basic genetic, endogenous, and neurological systems between individuals. It is based on evolved brain systems, human thought, behavior, and personality have been shaped by forces of evolution (natural and sexual selection) over millions of years. It also emphasizes that what we think, feel, and do is always an interaction between nature (biological) and nurture (environment).

Learning-Based Cognitive Theories - It focuses only on behavior, not on hypothetical and unobservable internal states such as thoughts, feelings, drives, or motives. All behavior learned through association and/or its consequences.
