The Computer Revolution Daniel E. Sichel, 1997 During the 1980s and into this decade U S businesses poured billions of dollars into computers and other information technology Yet the productivity performance of the U S economy in the 1980s remained lackluster especially in the service sector leading many observers to suspect that companies were not getting their money's worth from these high tech investments At the same time academic research found little evidence of a productivity payoff But have the tables now turned With an apparent improvement in productivity in recent years much academic and popular opinion now suggests that the payback is at hand or just around the corner As the nation embarks on a major effort to develop an Information Superhighway it is critical for policymakers opinion leaders and others to understand the contribution and role of information technology in the economy during recent decades This book provides a straightforward guide to the economic issues underlying the debates about these issues using quantitative and historical analysis supplemented with interviews of small and large service sector companies To set the stage Daniel Sichel reviews the debates over the role of computers and summarizes the essential facts about computer use with a particular emphasis on software Going beyond basic facts Sichel describes an economic framework for assessing the aggregate economic impact of computers in recent decades and for looking ahead at this impact in the future Quantitative estimates from this framework along with supporting historical and interview evidence place limits on the contribution of computers to the overall economy When compared to the size of the slowdown in productivity growth in the early 1970s the overall impact of computers appears relatively modest in part because the share of computers in the nation's capital stock is surprisingly small Looking ahead Sichel also raises questions as to whether computers are likely to solve the nation's productivity woes in the future

Information Technology Ethics: Cultural Perspectives Hongladarom, Soraj, Ess, Charles, 2006-12-31 This book is the first publication that takes a genuinely global approach to the diverse ethical issues evoked by Information and Communication Technologies and their possible resolutions Readers will gain a greater appreciation for the problems and possibilities of genuinely global

information ethics which are urgently needed as information and communication technologies continue their exponential growth Provided by publisher **Air University Review** ,1975 *The New Media Reader* Noah Wardrip-Fruin,Nick Montfort,2003-02-14 A sourcebook of historical written texts video documentation and working programs that form the foundation of new media This reader collects the texts videos and computer programs many of them now almost impossible to find that chronicle the history and form the foundation of the still emerging field of new media General introductions by Janet Murray and Lev Manovich along with short introductions to each of the texts place the works in their historical context and explain their significance The texts were originally published between World War II when digital computing cybernetic feedback and early notions of hypertext and the Internet first appeared and the emergence of the World Wide Web when they entered the mainstream of public life The texts are by computer scientists artists architects literary writers interface designers cultural critics and individuals working across disciplines The contributors include chronologically Jorge Luis Borges Vannevar Bush Alan Turing Ivan Sutherland William S Burroughs Ted Nelson Italo Calvino Marshall McLuhan Jean Baudrillard Nicholas Negroponte Alan Kay Bill Viola Sherry Turkle Richard Stallman Brenda Laurel Langdon Winner Robert Coover and Tim Berners Lee The CD accompanying the book contains examples of early games digital art independent literary efforts software created at universities and home computer commercial software Also on the CD is digitized video documenting new media programs and artwork for which no operational version exists One example is a video record of Douglas Engelbart s first presentation of the mouse word processor hyperlink computer supported cooperative work video conferencing and the dividing up of the screen we now call non overlapping windows another is documentation of Lynn Herschman s Lorna the first interactive video art installation **The Computer Revolution** Kathleen Richard,1983

Perspective ,1992-11 **Literacy, Technology, and Society** Gail E. Hawisher,Cynthia L. Selfe,1997 Designed to help readers become critical thinkers about technology not simply consumers of technology The readings span a broad range of topics and genres and include alternative readings available on a World Wide Web site connected to the book An abundance of writing to learn and writing to communicate assignments provide practice in crafting reflective pieces thoughtful analyses of issues argumentative discourse research proposals multimedia projects and other kinds of electronic writing aimed at on line discussion groups **The Computer Revolution** Edmund Callis Berkeley,1962 Proceedings of the Computer Science and Engineering Curricula Workshop, June 6-7, 1977, Williamsburg, Virginia ,1977 *A Bibliographic Guide to the History of Computing, Computers, and the Information Processing Industry* ,1990-05-21 As millions of people have been exposed to computing through the tremendous growth of microcomputers there has developed an increasing appreciation of the history of data processing which dates back many decades before the arrival of the computer Stretching back to at least the 1860s such early technologies as adding machines punch cards and the office appliance industry are now being recognized for their place in the history of the information processing industry This work brings together a comprehensive

list of sources that offer a general introduction to the literature of the industry Divided into nine chapters covering topics and historical periods the bibliography provides an annotated list of published materials describing both the history of the industry and significant items of general interest Each chapter is introduced with a short review of historically important issues and comments on the literature and contains contemporary publications as well as more recent material To give the work a continuing usefulness ongoing publications such as computer magazines are highlighted Entries are grouped under nearly 100 subheadings covering such material as contemporary descriptions of hardware and software of the past seminal technical papers industry surveys programming languages significant individuals and companies and the role of Japan and microcomputing All citations are annotated with a brief summary of either the work s contents or its historical importance while two indexes provide both subject references and author citations This bibliography will be an important reference source for courses in the history of data processing and business history and a useful addition to public college and university libraries
