Critical Global Perspectives Binaya Subedi, 2010-03-01 The primary purpose of this book is to invite educators to re think what it means to critically conceptualize knowledge about the world In other words imagining curriculum in a critical way means decolonizing mainstream knowledge about global societies Such an approach re evaluates how we have come to know the world and asks us to consider the socio political context in which we have come to understand what constitutes an ethical global imagination A critical reading of the world calls for the need to examine alternative ways of knowing and teaching about the world a pedagogy that recognizes how diverse subjects have come to view the world A critical question this book raises is What are the radical ways of re conceptualizing curriculum knowledge about global societies so that we can become accountable to the different ways people have come to experience the world Another question the book raises is how do we engage with complexities surrounding social differences such as gender race ethnicity religion etc in the global contexts Analyzing global issues and events through the prism of social difference opens up spaces to advocate a transformative framework for a global education curriculum Transformative in the sense that such a curriculum asks students to challenge stereotypes and engages students in advocating changes within local global contexts A critical global perspective advocates the value of going beyond the nation state centered approach to teaching about topics such as history politics culture etc It calls for the need to develop curriculum that accounts for transnational formations an intervention that asks us to go beyond issues that are confined within national borders Such a practice recognizes the complicated ways the local is connected to the global and vice versa and cautions against creating a hierarchy between national and global issues It also suggests the need to critically examine the pitfalls of forming dichotomies between the local or the national and the global or the center and the periphery

Lindsay, 1997 Religious Politics in Global and Comparative Perspective William H. Swatos Jr., 1989-09-07 Current social and political theories which tend to dismiss religious resurgence as a deviant occurrence in the broad sweep of history do not provide an adequate framework for the study of the dramatic resurgence of religion as a worldwide political force This book is the first to address the interplay of religion and politics systematically and on a global scale Offering interpretive essays as

well as quantitative comparative analyses it develops a comprehensive theoretical framework and presents the most complete comparative account available of the realities of religious politics in the contemporary world The first of the interpretive chapters focuses on the cultural factor as a means of clarifying the role of religion in the modern world system The next two chapters examine the concept of the self in the context of globalization and the absence of solidarity as a unifying force in societal systems The role of ultimate values in politics and the reasons for the emergence of militant religious movements in nation states is also considered A worldwide study of religious change between 1900 and 1980 gives a clear picture of contemporary global religious movements and formulates a tentative set of explanations of change based on data analysis The statistical links between religious beliefs and political views and between religion and democracy are explored The editor's concluding chapter looks at the implications of the authors findings for general theory in the sociology of religion The editor stresses the need for reconceptualizing basic theoretical constructs particularly the concept of religion itself An important contribution to our understanding of the religious and political forces that are shaping the modern world this work will be of interest to academics researchers and students of world religions sociology and political science
