

## Theoretical perspectives in sociology: functionalism, conflict theory, and symbolic

interactionism

Theoretical perspectives in sociology are important tools that help explain and analyze the complexities of social life. These theoretical perspectives offer different lenses through which to view society, each emphasizing a particular aspect of human behavior. The three major sociological theories – functionalism, conflict theory, and symbolic interactionism – provide an overall framework for understanding how individuals interact within societies.

Functionalism is a macro-level perspective that views society as composed of interrelated parts working together to maintain stability and order. This approach emphasizes the shared values, beliefs, norms, and patterns that make up our social world by focusing on how people's actions contribute to larger structural processes or systems such as education or religion. Functionalists believe that change occurs when components in the system are altered so they can better meet the needs of those who depend on them for survival; this creates equilibrium between individual behavior and collective societal goals. For example, one might look at educational policies from a functionalist perspective to understand why certain classes have higher graduation rates than others despite having similar backgrounds: changes in curriculum design may be necessary if all students are going to benefit equally from their educational experience regardless of race or socioeconomic status.

In contrast with functionalist thought is conflict theory which focuses more on inequality rather than harmony among members of society. Conflict theorists suggest that power dynamics play a central role in maintaining unequal distributions of resources between various groups due to competing interests (i.e., class struggles). In other words, different parties strive against one another over scarce resources creating tension within communities leading either towards progress or further oppression depending upon who has access/power over said resources—the wealthy upper-class population usually being able benefit most while those lower down suffer inequity due largely unchecked institutionalized racism/sexism etc. As such it's easy see why this perspective tends lean heavily towards Marxist ideologies highlighting economic exploitation amongst large corporations profit seeking endeavors without any regard whatsoever given workers rights thus often leaving these vulnerable populations powerless economically speaking under very precarious conditions whereby resistance only makes matters worse since there's little room left anymore negotiate terms more favorable outcomes via labor strikes etc.

Lastly we come Symbolic Interaction Theory (SIT)—a micro-level approach focused primarily on communication patterns between individuals within small group settings often times based off personal interactions experienced throughout day daily lives hence its emphasis placed symbols meanings attached them during interactions take place e.g.:
