Intelligent Transportation Systems - Problems and Perspectives Aleksander Sładkowski, Wiesław Pamuła, 2015-06-24 This book presents a discussion of problems encountered in the deployment of Intelligent Transport Systems ITS It puts emphasis on the early tasks of designing and proofing the concept of integration of technologies in Intelligent Transport Systems In its first part the book concentrates on the design problems of urban ITS The second part of the book features case studies representative for the different modes of transport These are freight transport rail transport and aerospace transport encompassing also space stations The book provides ideas for deployment which may be developed by scientists and engineers engaged in the design

of Intelligent Transport Systems It can also be used in the training of specialists students and post graduate students in universities and transport high schools Artificial Intelligence Perspective for Smart Cities Vahap Tecim, Sezer Bozkus Kahyaoglu, 2022-11-23 The concept of a smart city is used widely in general however it is hard to explain because of the complexity and multidimensionality of this notion However the essential qualification for being a smart city is to achieve sustainable social environmental and economic development and boost the living standards of society based on Information and Communication Technology ICT and Artificial intelligence AI AI in smart cities has become an important aspect for cities that face great challenges to make smart decisions for social well being particularly cybersecurity and corporate sustainability In this context we aim to contribute literature with a value added approach where various AI applications of smart cities are discussed from a different perspective First we start by discussing the conceptual design modeling and determination of components for the sustainability of a smart city structure Since smart cities operate on spatial based data it is important to design operate and manage smart city elements using Geographical Information Systems GIS technologies Second we define the structure type unit and functionality of the layers to be placed on the GIS to achieve best practices based on Industry 4 0 components Transportation is one of the key indicators of smart cities so it is critical to make transportation in smart cities accessible for different disabled groups by using AI technologies Third we demonstrate what kinds of technologies should be used for which disabled groups in different transportation vehicles with specific examples Finally we create a discussion platform for processes and sub processes such as waste management emergency management risk management and data management for establishing smart cities including the financial and ethical aspects **User**
