The papers are organized in topical sections and cover a broad range of subjects.

A Human-Centered Perspective of Intelligent Personalized Environments and Systems Bruce Ferwerda, Mark Graus, Panagiotis Germanakos, Marko Tkalčić, 2024-04-30. This book investigates the potential of combining the more quantitative data-driven techniques with the more qualitative theory-driven approaches towards the design of user-centred intelligent systems. It seeks to explore the potential of incorporating factors grounded in psychological theory into adaptive intelligent routines, mechanisms, technologies, and innovations. It highlights models, methods, and tools that are emerging from their convergence along with challenges and lessons learned. Special emphasis is placed on promoting original insights and paradigms with respect to latest technologies, current research trends, and innovation directions, e.g., incorporating variables derived from psychological theory and individual differences in adaptive intelligent systems so as to increase explainability, fairness, and transparency and decrease bias during interactions while the control remains with the user.

physicians tout the absence of an electronic medical record as a major selling point. Logically enough we've pinned the problems on clunky software, flawed implementations, absurd regulations, and bad karma. It was all of those things, but it was also something far more complicated. And far more interesting. Written with a rare combination of compelling stories and hard hitting analysis by one of the nation's most thoughtful physicians, *The Digital Doctor* examines healthcare at the dawn of its computer age. It tackles the hard questions from how technology is changing care at the bedside to whether government intervention has been useful or destructive. And it does so with clarity, insight, humor, and compassion. Ultimately it is a hopeful story. We need to recognize that computers in healthcare don't simply replace my doctor's scrawl with Helvetica. 12 writes the author, Dr. Robert Wachter. Instead they transform the work, the people who do it, and their relationships with each other and with patients. Sure we should have thought of this sooner. But it's not too late to get it right. This riveting book offers the prescription for getting it right, making it essential reading for everyone, patient and provider alike, who cares about our healthcare system.

Nonverbal Communication Judith A. Hall, Mark L. Knapp, 2013. This handbook's series aims to integrate knowledge of communication structures and processes. It is global in orientation, dedicated to cultural and epistemological diversity, as well as different scholarly approaches. The series features volumes on messages, codes, and channels, mode of address, communication situations, and context, methodology in communication science, and application areas. The latter features volumes devoted to a large range of specialist areas of communication science. The series as a whole aims at meeting the needs of undergraduates, postgraduates, academics, and researchers across the area of communication studies.

Encyclopedia of Networked and Virtual Organizations Goran Putnik, Maria Manuela Cunha, 2008. This book documents the most relevant contributions to the introduction of networked, dynamic, agile, and virtual organizational models, definitions, taxonomies, opportunities, and reference models and architectures. It creates a repository of the main developments regarding the virtual organization, compiling definitions, characteristics, comparisons, advantages, practices, enabling technologies, and best practices. Provided by publisher.

Information Security and Ethics Hamid R. Nemati, 2008. This six-volume set serves as the ultimate source on all theories and models associated with information privacy and safeguard practices to help anchor and guide the development of technologies, standards, and best practices to meet these challenges.

Digital Destiny Jeff Chester, 2007. With the explosive growth of the Internet and broadband, we now have the potential for a truly democratic media system, offering a wide variety of independent sources of news and information, with control over content in the hands of the many rather than a few select media giants. But powerful communications companies have other plans: the big cable TV and Internet providers are using their political clout to gain ever greater control over the Internet. How does this new media system function? What is at stake? And what can we do to fight it?
