Personal Wireless Communications:

Personal Wireless Communications Marco Conti, Silvia Giordano, Enrico Gregori, Stephan Olariu, 2003-10-02 This book constitutes the refereed proceedings of the IFIP TC6 Eighth International Conference on Personal Wireless Communications PWC 2003. PWC 2003 is the flagship conference of the IFIP Working Group 6.8 Mobile and Wireless Communications and is the premier international forum for discussions between researchers, practitioners and students interested in the symbiosis of mobile computing and wireless networks. It is a great pleasure to present the PWC 2003 technical program. This year the conference received 115 submissions from 27 countries indicating that PWC is a reference conference for worldwide researchers from the wireless and mobile community. With so many papers to choose from, the Technical Program Committee's job to provide a conference program of the highest technical quality was challenging and time consuming. From the 115 submissions we finally selected 34 full papers and 15 short papers for presentation in the conference technical sessions. The conference technical program was split into three days and included in addition to the 49 refereed contributions 4 invited papers from top level researchers from the mobile and wireless community. To give researchers the opportunity to present ongoing work and the novel ideas they are starting to explore, we included in the technical program two work in progress sessions and two novel ideas sessions. The technical program also included a poster session devoted to presenting ongoing research projects on wireless and mobile communications.

Personal Wireless Communications Józef Wozniak, Jerzy Konorski, 2000-09-30 There are numerous factors contributing to the dynamic growth of wireless communication systems we have been observing in the past 10 years, the most important being the increasing network user mobility and the technological advances in high speed data transmission over radio channels. Research centres and standards making institutions the world over conduct works on 3G integrated systems of person to person and person to computer communications, wireless counterparts of classical LAN, ATM and IP architectures, satellite and access networks as well as advanced service platforms like WAP and other concepts. Among the many commercial and non profit organisations professionally involved in the development of the new information infrastructure of particular influence is the International Federation for Information Processing. Within its Technical Committee TC 6 a working group WG 6.8 has been set up to co ordinate IFIP activities in the area of wireless communications. It has done so among others by arranging regular meetings of academic and industrial researchers known as IFIP TC 6 WG 6.8 Workshops on Personal Wireless Communications pWC. Such workshops were held in recent years in Prague, Frankfurt, M, Tokyo and Copenhagen and their success has resulted in the promotion of PWC to the status of IFIP Working Conference.

Personal Wireless Communications Ignas Niemeegers, Sonia Heemstra de Groot, 2004-09-01 The IFIP TC 6 9th International Conference on Personal Wireless Communications PWC 2004 is the main conference of the IFIP Working Group 6.8 Mobile and Wireless Communications. The field of personal wireless communications is steadily growing in importance from an academic, industrial and societal point of view. The dropping cost of WLAN and short range

technologies such as Bluetooth and Zigbee is causing the proliferation of personal devices and appliances equipped with radio interfaces. Together with the gradual deployment of powerful wireless infrastructure networks such as 3G cellular systems and WLAN hotspots the conditions are being created for a affordable ubiquitous communication involving virtually any artifact. This enables new application areas such as ambient intelligence where a world of devices, sensors and actuators surrounding us use wireless technology to create systems that assist us in an unobtrusive way. It also allows the development of personal and personalized environments that accompany a person wherever he or she goes. Examples are Personal Area Networks (PAN) physically surrounding a person and personal networks with a potentially global reach. PWC 2004 reflects these developments which are happening on a global scale. Researchers from all over the world and in particular a large number from Asia made contributions to the conference. There were 100 submissions. After a thorough reviewing process 25 full papers and 13 short papers were retained for presentation in the technical sessions. The papers cover the whole range of wireless and mobile technologies: cellular systems, WLAN, ad hoc and sensor networks, host and network mobility, transport protocols for wireless systems and the physical layer.

Personal Wireless Communications, 2004 Technology Trends in Wireless Communications Ramjee Prasad, Marina Ruggieri, 2003. Whether gaming, constant communications and connectivity or streaming video and audio is the future killer app that keeps consumers reaching for mobile devices, you can turn to this book for the hands on technology details you need to know to prepare yourself and your organizations for tomorrow's world of wireless multimedia. The book includes in depth discussions on the hottest topics in this area including AAA, multiple access protocols, IPv6 and adaptive technologies. Such resource management strategies as power control, user admission techniques and congestion control are fully explained, helping you design wireless multimedia systems that provide the required degree of quality of service by effectively utilizing limited radio resources.

Wireless Personal Communications Systems David J. Goodman, 1997. This book presents the technology and underlying principles of wireless communications systems. Written by a leading authority, it provides the perfect introduction for the professional or the student who has a basic understanding of telecommunications. Each system is described using a unified framework so the reader can easily compare and contrast the systems. More specifically, key features such as architecture, radio transmission, logical channels, messages, mobility management, security, power control and handoff are addressed for each system. In addition, an analysis of such design goals as low price, wide geographical coverage

transmission quality privacy and spectrum efficiency helps the reader understand why the various systems have such divergent designs Each chapter concludes with a set of exercises and the last chapter is dedicated to twelve tutorials that provide concise explanations of technical subjects essential to wireless communications
