The Theory & Practice of Perspective George. A. Storey, 2024-02-10 IT is much easier to understand and remember a thing when a reason is given for it than when we are merely shown how to do it without being told why it is so done for in the latter case instead of being assisted by reason our real help in all study we have to rely upon memory or our power of imitation and to do simply as we are told without thinking about it The consequence is that at the very first difficulty we are left to flounder about in the dark or to remain inactive till the master comes to our assistance Now in this book it is proposed to enlist the reasoning faculty from the very first to let one problem grow out of another and to be dependent on the foregoing as in geometry and so to explain each thing we do that there shall be no doubt in the mind as to the correctness of the proceeding The student will thus gain the power of finding out any new problem for himself and will therefore acquire a true knowledge of perspective George Adolphus Storey Book First The Necessity of the Study of Perspective to Painters Sculptors and Architects LEONARDO DA VINCI tells us in his celebrated Treatise on Painting that the young artist should first of all learn perspective that is to say he should first of all learn that he has to depict on a flat surface objects which are in relief or distant one from the other for this is the simple art of painting Objects appear smaller at a distance than near to us so by drawing them thus we give depth to our canvas The outline of a ball is a mere flat circle but with proper shading we make it appear round and this is the perspective of light and shade The next thing to be considered is the effect of the atmosphere and light If two figures are in the same coloured dress and are standing one behind the other then they should be of slightly different tone so as to separate them And in like manner according to the distance of the mountains in a landscape and the greater or less density of the air so do we depict space between them not only making them smaller in outline but less distinct Sir Edwin Landseer used to say that in looking at a figure in a picture he liked to feel that he could walk round it and this exactly expresses the impression that the true art of painting should make upon the spectator There is another observation of Leonardo s that it is well I should here transcribe he says Many are desirous of learning to draw and are very fond of it who are notwithstanding void of a proper disposition for it This may be known by their want of perseverance like boys who draw everything in a hurry never finishing or shadowing This shows they do not care for their work and all instruction is thrown away upon them At the present time there is too much of this everything in a hurry and beginning in this way leads only to failure and disappointment These observations apply equally to perspective as to drawing and painting Unfortunately this study is too often neglected by our painters some of them even complacently confessing their ignorance of it while the ordinary student either turns from it with distaste or

only endures going through it with a view to passing an examination little thinking of what value it will be to him in working out his pictures Whether the manner of teaching perspective is the cause of this dislike for it I cannot say but certainly most of our English books on the subject are anything but attractive All the great masters of painting have also been masters of perspective for they knew that without it it would be impossible to carry out their grand compositions In many cases they were even inspired by it in choosing their subjects When one looks at those sunny interiors those corridors and courtyards by De Hooghe with their figures far off and near one feels that their charm consists greatly in their perspective as well as in their light and tone and colour

Drawing in Perspective Oliver Striegel, 2006 Artists can learn how to enter the third dimension with this generously illustrated full color guide to perspective With interesting visual examples illuminating the text every step of the way it explains how to use vanishing points to create depth choose one two or three point perspective to place an object in the background apply light shadow and reflection to produce realistic images and make a figure seem elevated or menacing These are the techniques that the great painters have employed to add motion time weather and mood to their work and they re now available to everyone very well illustrated and easy to follow covers all types of perspective problems the illustrations are fascinating American Artist an excellent introduction a fine display of step by step images Midwest Book Review

The Psychology of Perspective and Renaissance Art Michael Kubovy, 1986 Michael Kubovy an experimental psychologist recounts the lively history of the invention of perspective in the fifteenth century and shows how as soon as the invention spread it was used to achieve subtle and fascinating aesthetic effects A clear presentation of the fundamental concepts of perspective and the reasons for its effectiveness drawing on the latest laboratory research on how people perceive leads into the development of a new theory to explain why Renaissance artists such as Leonardo and Mantegna used perspective in unorthodox ways which have puzzled art scholars This theory illuminates the author s broader consideration of the evolution of art the book proposes a resolution of the debate between those who believe that the invention discovery of perspective is a stage in the steady progress of art and those who believe that perspective is merely a conventional and arbitrary system for the representation of space
