Abstract

We here examine how different perspectives of understanding written discourse, like the reader's, the writer's or the text's point of view, affect the quality of emotion annotations. We conducted a series of annotation experiments on two corpora, a popular movie review corpus and a genre- and domain-balanced corpus of standard English. We found statistical evidence that the writer's perspective yields superior annotation quality overall. However, the quality one perspective yields compared to the other(s) seems to depend on the domain the utterance originates from. Our data further suggest that the popular movie review data set suffers from an atypical bimodal distribution which may decrease model performance when used as a training resource.

1 Introduction

In the past years, the analysis of subjective language has become one of the most popular areas in computational linguistics. In the early days, a simple classification according to the semantic po-

There is also an increasing awareness of different perspectives one may take to interpret written discourse in the process of text comprehension. A typical distinction which mirrors different points of view is the one between the writer and the reader(s) of a document as exemplified by utterance (1) below (taken from Katz et al. (2007)):

(1) Italy defeats France in World Cup Final

The emotion of the writer, presumably a professional journalist, can be expected to be more or less neutral, but French or Italian readers may show rather strong (and most likely opposing) emotional reactions when reading this news headline. Consequently, such finer-grained emotional distinctions must also be considered when formulating instructions for an annotation task.

NLP researchers are aware of this multi-perspectival understanding of emotion as contributions often target either one or the other form of emotion expression or mention it as a subject of future work (Mukherjee and Joshi, 2014; Lin and Chen, 2008; Calvo and Mac Kim, 2013). However, contributions aiming at quantifying the effect of altering perspectives are rare (see Section 2). This is especially true for work examining differences in annotation results relative to these perspectives. Although this is obviously a crucial de-

Perspectives Joanna Gibson, 2002 Introducing students to writing from sources through the use of case studies this text offers writing instruction and serves as a guide This text's case studies illustrate rhetorical situations on the same topic serve as models of narrowed topics and stress the connection between reading and writing skills *The Oxford Guide for Writing Tutors* Melissa Ianetta, Lauren Fitzgerald, 2016 The Oxford Guide for Writing Tutors introduces two conversations to the tutor's preparation one about the creation of knowledge in writing programs the other about tutor research This approach to tutor training provides several benefits First it allows tutors to test their theories of what might work in a writing center session and helps them to move professional conversation towards why such things happen They bridge the theory practice divide that often frustrates both novices and experienced tutors By conducting research to answer such questions tutors can help themselves the writers with whom they work their fellow tutors and the writers with whom they work And further this approach gives the reader new methods for appreciating and critiquing scholarly work making it easier to understand the best ways to help writers and to move the field forward As writing tutoring programs take on a variety of forms and pursue a range of missions this book aims to create a flexible text whose contents can be easily rearranged to support a broad spectrum of reader needs Each chapter accordingly can be read independently the text does not rely on a sequential reading to create meaning The book also includes intra textual and extra textual references for the reader who wants to inquire further That is throughout the book are references to material in other chapters that might be of interest to the reader intrigued by the topic at hand So too in each chapter we include references to and citations of the scholarship that supports much of the common knowledge of the field including in the Handbook both previous tutor education textbooks and research from the field The aim is to aid the interested reader's inquiry into the scholarship of the field as well as to ground advice about practice in research that testifies to the effectiveness a range of tutoring practices Much of the scholarship cited throughout the book is authored by undergraduate tutor researchers as well as several former tutors who were graduate students when they published their articles This crucial aspect best models the ways in which tutors themselves can bring together practice and research in their day to day work and in their informed thinking about this work Including tutor voices is an important tradition of the tutor education textbook because these are voices that speak to the issues concerning tutors in a range of institutions and programs across the country
