**Perspectives on Learning** Denis Charles Phillips, Jonas F. Soltis, 1985 Rather than simply outlining the classical and modern theories of learning this widely adopted text brings the material to life through case studies that engage students in debates about what really happens in classrooms Students are encouraged to test the strengths and weaknesses of each theory so that ultimately they will learn to formulate their own philosophies of teaching and learning *Perspectives on Learning* is one of the five books in the highly regarded Teachers College Press Thinking About Education Series now in its Fourth Edition All of the books in this series are designed to help pre and in service teachers bridge the gap between theory and practice Book jacket *10 Perspectives on Learning in Education* Jimmy Casas, Todd Whitaker, Jeffrey Zoul, 2020 The best educators never stop learning about their students or their craft In this second volume of the Routledge Great Educators Series ten of education's most inspiring thought leaders come together to bring you their top suggestions for improving your students learning in the classroom and your own professional learning as an educator The book's practical strategies and stories will inspire you on your journey to

make a difference in students lives      *Supporting Lifelong Learning: Perspectives on learning* Roger Harrison,2002 This Open University Reader examines the practices of learning and teaching which have been developed to support lifelong learning and the understanding and assumptions which underpin them The selection of texts trace the widening scope of academic understanding of learning and teaching and considers the implications for those who develop programmes of learning It examines in great depth those theories which have had the greatest impact in the field theories of reflection and learning from experience and theories of situated learning The implications of these theories are examined in relation to themes which run across the reader namely workplace learning literacies and the possibilities offered by information and communication technologies The particular focus of this Reader is on the psychological or cognitive phenomena that happen in the minds of individual learners The readings have been selected to represent a range of experience in different sectors of education from around the globe      **Perspectives on Thinking, Learning, and Cognitive Styles** Robert J.

Sternberg,Li-fang Zhang,2014-04-08 This volume presents the most comprehensive balanced and up to date coverage of theory and research on cognitive thinking and learning styles in a way that represents diverse theoretical perspectives includes solid empirical evidence testing the validity of these perspectives and shows the application of these perspectives to school situations as well as situations involving other kinds of organizations International representation is emphasized with chapters from almost every major leader in the field of styles Each chapter author has contributed serious theory and or published empirical data work that is primarily commercial or that implements the theories of others The book s central premise is that cognitive learning and thinking styles are not abilities but rather preferences in the use of abilities Traditionally many psychologists and educators have believed that people s successes and failures are attributable mainly to individual differences in abilities However for the past few decades research on the roles of thinking learning and cognitive styles in performance within both academic and nonacademic settings has indicated that they account for individual differences in performance that go well beyond abilities New theories better differentiate styles from abilities and make more contact with other psychological literatures recent research in many cases is more careful and conclusive than are some of the older studies Cognitive learning and thinking styles are of interest to educators because they predict academic performance in ways that go beyond abilities and because taking styles into account can help teachers to improve both instruction and assessment and to show sensitivity to cultural and individual diversity among learners They are also of interest in business where instruments to assess styles are valuable in selecting and placing personnel The state of the art research and theory in this volume will be of particular interest to scholars and graduate students in cognitive and educational psychology managers and others concerned with intellectual styles as applied in educational industrial and corporate settings      *Integrated and Holistic Perspectives on Learning, Instruction and Technology* J.M. Spector,T.M. Anderson,2005-12-17 One outcome of recent progress in educational technology is strong interest in providing effective

support for learning in complex and ill structured domains We know how to use technology to promote understanding in simpler domains e g orientation information procedures with minimal branching etc but we are less sure how to use technology to support understanding in more complex domains e g managing limited resources understanding environmental impacts etc Such domains are increasingly significant for society Technology e g collaborative tele learning digital repositories interactive simulations etc can provide conceptually and functionally rich domains for learning However this introduces the problem of determining what works in which circumstances and why Research and development on these matters is reflected in this collection of papers This research suggests a need to rethink foundational issues in educational philosophy and learning technology One major theme connecting these papers is the need to address learning in the large from a more holistic perspective A second theme concerns the need to take learners where and as they are integrating technology into effective learning places Significant and systematic progress in learning support for complex domains demands further attention to these important issues

**International Perspectives on Education** Meng Huat Chau, Trevor Kerry, 2018 International Perspectives on Education draws on the knowledge and experience of a distinguished team of international educationists including Howard Gardner and Kristján Kristjánsson Each chapter can be accessed as a resource on a specific topic but the chapters are also grouped into three sections to provide an invaluable source of thinking and knowledge from leading thinkers and practitioners in their fields Perspectives on Education Supporting the Learning Process and Teachers and Professional Development The prevailing view by all contributors is that the learning experience and environment should not only be stimulating and intellectually interesting but also socially inclusive and fulfilling with a need to develop learners potential and personality around a set of good values All this lies at the heart of quality education and stimulates a new debate in support of the re humanisation of education rather than the de humanisation that we have seen in recent times with attempts to tie its products and processes more closely with models generated in the world of commerce This collection reflects the development of education within an international context of trends good practices and experience It is aimed at those who have an interest in education as an academic area of study undergraduate students and lecturers higher degree students and those involved in or training for the teaching profession and those who are concerned with the management and governance of education New Perspectives on Individual Differences in Language Learning and Teaching Mirosław

Pawlak, 2012-04-05 The volume constitutes an attempt to capture the intricate relationship between individual learner differences and other variables which are of interest to theorists researchers and practitioners representing such diverse branches of applied linguistics as psycholinguistics sociolinguistics pragmatics or language teaching methodology It brings together contributions by Polish and international authors including leading experts in the field touching upon changing perspectives on individual variation cognitive affective and social variables learning deficits as well as their impact on learning and teaching It offers a multifaceted perspective on these problems and shows how theory and research can be translated into classroom practice Educational Perspectives, 1989 **Learning to Learn** Ruth Deakin Crick, CRISTINA STRINGHER, Kai Ren, 2014-04-28 Learning to Learn provides a much needed overview and international guide to the field of

learning to learn from a multidisciplinary lifelong and lifewide perspective A wealth of research has been flourishing on this key educational goal in recent years Internationally it is considered to be one of the key competencies needed to compete in the global economy but also a crucial factor for individual and social well being This book draws on leading international contributors to provide a cutting edge overview of current thinking on learning to learn research policy and implementation in both formal and informal learning environments But what learning to learn is exactly and what its constituting elements are are much debated issues These seem to be the crucial questions if assessment and development of this malleable side of intelligence are to be accomplished The approach of this volume is to consider a broad conception of learning to learn not confined to only study strategies or metacognition yet acknowledging the importance of such elements The book sets out to answer five main questions What is learning to learn What are its functions and how do we assess it What does it promise to the individual and society at large How is it conceived in national curricula internationally How can it be developed in a variety of contexts The text is organized into two parts the first addresses the core question of the nature of learning to learn from a theoretical and policy viewpoint and the second presents recent research carried out in several educational systems with special attention to assessment and curriculum It gives an account of pedagogical practices of learning to learn and its role in individual empowerment from childhood to adulthood Contributors also highlight the potential use of learning to learn as an organizing concept for lifelong learning school improvement and teacher training along with potential conflicts with existing incentive practices and policies This book is a vital starting point and guide for any advanced student or researcher looking to understand this important area of research
