Atlas of Clinical PET in Oncology H. Bender,H. Palmedo,H.-J. Biersack,P.E. Valk,2012-12-06 Clinical studies during the past 10 years have shown that PET is more sensitive than CT and MRI for the detection of many tumors In many cases however for example in head and neck tumors combination with radiological procedures is necessary It may be speculated that PET should be the first study in a malignant tumor when metastatic spread is suspected MRI and CT may then be restricted to those body areas which evince sites of increased glucose metabolism Thus a combination of metabolic and morphologic procedures will enhance tumor detection and change the therapeutic strategy In this light an atlas including PET CT MRI and histology data seems desirable to combine metabolic and morphologic imaging This book presents an overview of the available data which should be of great interest not only for specialists in radiology and nuclear medicine but also for oncologists
