The Oxford Handbook of the Economics of Gambling Leighton Vaughan Williams, Donald S. Siegel, 2013 This handbook is a definitive source of path breaking research on the economics of gambling It is divided into sections on casinos sports betting horserace betting betting strategy motivation behaviour and decision making in betting markets prediction markets and political betting and lotteries and gambling machines

Chain Store Inquiry: Prices, margins and special discounts and allowance of chain and independent distributors, 1933 Behavioural Sports Economics Hannah Josepha Rachel Altman, Morris Altman, Benno Torgler, 2021-12-19 Economists have entered into the realm of sports to provide what they believe to be more cogent explanations for sport related behaviour and to suggest ways in which incentives can improve sports outcomes But prices and income the traditional workhorses of conventional economics can only provide partial explanations and understandings Drawing on a bounded rationality approach to behavioural economics this book demonstrates the analytical insights to be gained by supplementing the conventional economics toolbox with psychological cognitive sociological and institutional factors The international cast list of contributors cover a wide range of sports topics on which a behavioural approach can reveal new insights These include preferences managerial efficiency choking doping favouritism athlete well being and spectator behaviour Throughout the book there is an emphasis on the cognitive limits to smart decision making as well as the critical role played by the decision making environment This volume demonstrates that adopting a bounded rationality approach complimented with other behaviouralist approaches helps to better explain sport related behavioural sub optimal behavioural and market failures It also provides insights that could be used to improve sports outcomes and the well being of those involved in sports and to better configure policy to enhance sports performance This groundbreaking book will be an indispensable reference to students and scholars of sports economics sports management and sports science

Experimental Economics Douglas D. Davis, Charles A. Holt, 1993-01-03 An examination of an area of economic research whereby economists have begun to use laboratories to evaluate economic propositions under carefully controlled conditions The authors argue for the effectiveness of this technique in selected circumstances

How to Find a Black Cat in a Coal Cellar Joseph Buchdahl, 2013-01-25 How do we know if we can beat the bookmaker That s easy just look at our bank balance But how do we know if we ve not just been lucky More specifically how do we know that someone who says he can do it and who is selling his expertise can keep doing it again and again through talent skill and hard work This book examines the techniques available to answer that question to identify those qualities and to help the punter find value for money in an industry that appears to be largely built on trust and the influence of chance to uncover the truth about sports tipsters and ultimately how to find the best tipsters the Black Cats

Arbitrage and Rational Decisions Robert Nau, 2025-01-31 This unique book offers a new approach to the modeling of rational decision making under conditions of uncertainty and strategic and competition interactions among agents It presents a unified theory in which the most basic

axiom of rationality is the principle of no arbitrage namely that neither an individual decision maker nor a small group of strategic competitors nor a large group of market participants should behave in such a way as to provide a riskless profit opportunity to an outside observer Both those who work in the finance area and those who work in decision theory more broadly will be interested to find that basic tools from finance arbitrage pricing and risk neutral probabilities have broader applications including the modeling of subjective probability and expected utility incomplete preferences inseparable probabilities and utilities nonexpected utility ambiguity noncooperative games and social choice Key results in all these areas can be derived from a single principle and essentially the same mathematics A number of insights emerge from this approach One is that the presence of money or not is hugely important for modeling decision behavior in quantitative terms and for dealing with issues of common knowledge of numerical parameters of a situation Another is that beliefs probabilities do not need to be uniquely separated from tastes utilities for the modeling of phenomena such as aversion to uncertainty and ambiguity Another overarching issue is that probabilities and utilities are always to some extent indeterminate but this does not create problems for the arbitrage based theories One of the book's key contributions is to show how noncooperative game theory can be directly unified with Bayesian decision theory and financial market theory without introducing separate assumptions about strategic rationality This leads to the conclusion that correlated equilibrium rather than Nash equilibrium is the fundamental solution concept The book is written to be accessible to advanced undergraduates and graduate students researchers in the field and professionals
