Passerini's Dynamic Process Transformation model provides a living model for constant ongoing process evolution and optimization. The authors focus on maximizing three drivers of change. First, open market rules: each business process must be run as a separate business instead of via monolithic mandates coming down from on high. Second, there must be unified accountability: outcomes must be clear and consistent across the company instead of being siloed within departments. And third, there needs to be a dynamic operating engine, a methodology to convert the constantly changing business process goals into tactical day-to-day employee actions. With numerous examples from leading companies, this book shows how to proactively keep business processes across the company from becoming obsolete and take advantage of a neglected key to success.
