**Principles of Tissue Engineering** Robert Lanza, Robert Langer, Joseph P. Vacanti, Anthony Atala, 2020-03-26 Now in its fifth edition Principles of Tissue Engineering has been the definite resource in the field of tissue engineering for more than a decade The fifth edition provides an update on this rapidly progressing field combining the prerequisites for a general understanding of tissue growth and development the tools and theoretical information needed to design tissues and organs

as well as a presentation by the world's experts of what is currently known about each specific organ system. As in previous editions, this book creates a comprehensive work that strikes a balance among the diversity of subjects that are related to tissue engineering, including biology, chemistry, material science, and engineering, among others, while also emphasizing those research areas that are likely to be of clinical value in the future. This edition includes greatly expanded focus on stem cells, including induced pluripotent stem (iPS) cells, stem cell niches, and blood components from stem cells. This research has already produced applications in disease modeling, toxicity testing, drug development, and clinical therapies. This up-to-date coverage of stem cell biology and the application of tissue engineering techniques for food production is complemented by a series of new and updated chapters on recent clinical experience in applying tissue engineering, as well as a new section on the emerging technologies in the field. Organized into twenty-three parts covering the basics of tissue growth and development, approaches to tissue and organ design, and a summary of current knowledge by organ system. Introduces a new section and chapters on emerging technologies in the field. Full color presentation throughout. Second Generation Cell and Gene-Based Therapies Alain Vertes, Nathan J. Dowden, Devyn Smith, Nasib Qureshi, 2020-02-07. Second Generation Cell and Gene Based Therapies: Biological Advances, Clinical Outcomes, and Strategies for Capitalisation serves as the only volume to the market to bridge basic science, clinical therapy, technology development, and business in the field of cellular therapy/cytotherapy. After more than two decades of painstaking fundamental research, the concept of therapeutic cells (stem cells, genes, etc.) beyond the concept of vaccines is reaching clinical trial with mounting confidence in the safety and efficacy of these products. Nonetheless, numerous incremental technical advances remain to be achieved. Thus, this volume highlights the possible R & D paths which will ultimately facilitate clinical delivery of cutting edge curative products. The next waves of innovation are reviewed in depth for hematopoietic stem cells, mesenchymal stem cells, tissue engineering, CAR T cells, and cells of the immune system, as well as for enabling technologies such as gene and genome editing. Additionally, deep dives in product fundamentals, history of science, pathobiology of diseases, scientific and technological bases, and financing and technology adoption constraints are taken to unravel what will shape the cytotherapy industry to the horizon 2025 and beyond. The outcome is not simply a scientific book, but a global perspective on the nascent field combining science, business, and strategic fundamentals. Helps readers learn about the most current trends in cell-based therapy, their overall effectiveness from a clinical perspective, and how the industry is moving therapies forward for capitalization. Perspectives section at the end of each chapter summarizes key learnings, hypotheses, and objectives highlighted and combines scientific and business insights. Edited and authored by scientists representing both basic and clinical research and industry, presenting a complete story of the current state and future promise of cellular therapies. *Resources in Education*, 1992-03.
