Problems, Technology and Solutions Geir M. Koien,Vladimir a. Oleshchuk,2025-01-13 The modern society is rapidly becoming a fully digital society This has many benefits but unfortunately it also means that personal privacy is threatened The threat does not so much come from a 1984 style Big Brother but rather from a set of smaller big brothers The small big brothers are companies that we interact with they are public services and institutions Many of these little big brothers are indeed also being invited to our private data by ourselves Privacy as a subject can be problematic At the extreme it is personal freedom against safety and security We shall not take a political stand on personal privacy and what level of personal freedom and privacy is the correct one Aspects of Personal Privacy in Communications is mostly about understanding what privacy is and some of the technologies may help us to regain a bit of privacy We discuss what privacy is about what the different aspects of

privacy may be and why privacy needs to be there by default There are boundaries between personal privacy and societal requirements and inevitably society will set limits to our privacy Lawful Interception etc There are technologies that are specifically designed to help us regain some digital privacy These are commonly known as Privacy Enhancing Technologies PETs We investigate some these PETs including MIX networks Onion Routing and various privacy preserving methods Other aspects include identity and location privacy in cellular systems privacy in RFID Internet of Things IoT and sensor networks amongst others Some aspects of cloud systems are also covered *Business and Technology Sources* ,1958 General
