Antivirals for Emerging Viruses: Vaccines and Therapeutics Lijun Rong, Lu Lu, Christopher C. Broder, 2020-12-22
This eBook is a collection of articles from a Frontiers Research Topic. Frontiers Research Topics are very popular trademarks of the Frontiers Journals Series; they are collections of at least ten articles all centered on a particular subject. With their unique mix of varied contributions from Original Research to Review Articles, Frontiers Research Topics unify the most influential researchers, the latest key findings, and historical advances in a hot research area. Find out more on how to host your own Frontiers Research Topic or contribute to one as an author by contacting the Frontiers Editorial Office: frontiersin.org about contact.

DNA Vaccination/Genetic Vaccination Hilary Koprowski, David B. Weiner, 2012-12-06
Genetic DNA immunization represents a novel approach to vaccine and immune therapeutic development. The direct injection of nucleic acid expression cassettes into a living host results in a limited number of its cells becoming factories for production of the introduced gene products. This host inappropriate gene expression has important immunological consequences, resulting in the specific immune activation of the host against the gene delivered antigen. The recent demonstration by a number of laboratories that the induced immune responses are functional in experimental models against both specific infectious diseases and cancers is likely to have dramatic consequences for the development of a new generation of experimental vaccines and immune therapies. This technology has the potential to enable the production of vaccines and immune-based therapies that are not only effective immunologically but are accessible to the entire world rather than just to the most developed nations.

Vaccine Development
Vaccination against pathogenic microorganisms represents one of the most important advances in the history of medicine. Vaccines including those against polio, measles, mumps, rubella, hepatitis A, hepatitis B, pertussis, and other diseases have dramatically improved and protected more human lives than any other avenue of modern medicine. The vaccine against smallpox, for example, has been so successful that it is now widely believed that this malicious killer responsible for more deaths in the twentieth century than World Wars I and II combined has been removed from the face of the earth.

HIV-Induced Damage of B Cells and Production of HIV Neutralizing Antibodies Francesca Chiodi, Gabriella Scarlatti, 2018-03-27
Multiple dysfunctions take place in the B cell compartment during HIV-1 infection, comprising depletion of resting memory B cells carrying serological memory to vaccines and previously met pathogens. In addition, population of B cells characterized by the expression of exhaustion markers are enlarged during HIV-1 infection. Antibodies with the capacity to neutralize a broad range of HIV-1 isolates can be detected only in a minority of infected patients after a year or more from acute infection. An open question is whether the inability of producing neutralizing HIV-1 antibodies is somehow linked to the B cell immunopathology observed in patients. In this research topic, we invited scientists to summarize the current state of knowledge on regulation and development of B cells and antibody responses during HIV-1 infection. Fifteen contributions were received, comprising both reviews and original articles. The articles are related to B cell

dysfunctions identified in HIV 1 infected individuals production of different types of antibodies neutralizing versus non neutralizing and of different isotypes in vivo during HIV 1 infection and the biological factors which may impact on this process clinical potential and applications of anti HIV antibodies and how to achieve neutralizing antibody responses to HIV 1 epitopes upon vaccination The topic has gathered articles on front line research undertaken in the field of B cells and antibodies in HIV 1 infection It is our hope that the collection of articles presented in this book may be useful for new and experienced scholars in the field and add a piece to the complex puzzle of knowledge needed for the development of an HIV 1 vaccine Mucosal Vaccination: Strategies to Induce and Evaluate Mucosal Immunity Andreas Frey,Pam
