QUANTUMCOMM 2009 the International Conference on Quantum Communication and Quantum Networking from satellite to nanoscale took place in Vico Equense near Naples Italy during October 26-30 2009 The conference made a significant step toward stimulating direct dialogue between the communities of quantum physics and quantum information researchers who work with photons atoms and electrons in pursuit of the common goal of investigating and utilizing the transfer of physical information between quantum systems This meeting brought together experts in quantum communication quantum information processing quantum nanoscale physics quantum photonics and networking In the light of traditional approaches to quantum information processing quantum communication mainly deals with encoding and securely distributing quantum states of light in optical fiber or in free space in order to provide the technical means for quantum cryptography applications Exciting advances in the area of quantum communication over the last decade have made the metropolitan quantum network a reality Several papers presented at this meeting have demonstrated that quantum cryptography is approaching the point of becoming a high tech application rather than a research subject The natural distance limitation of quantum cryptography has been significantly augmented using ideas of global quantum communication with stable orbit satellites The results presented at this conference demonstrated that practical secure satellite communication is clearly within reach
