Kursunogamalu, Stephan L. Mintz, Arnold Perlmutter, 2005-12-27 Held December 16 19 1999 these proceedings are derived from the Global Foundation Inc's Orbis Scientiae 1999 Topics include cosmological parameters unifying elementary particle physics cosmology superstrings and black holes

The Worldwide List of Alternative Theories and Critics Jean de Climont, 2020-11-01 This Worldwide List of Alternative Theories and Critics only available in English language includes scientists involved in scientific fields The 2023 issue of this directory includes the scientists found in the Internet The scientists of the directory are only those involved in physics natural philosophy The list includes 9700 names of scientists doctors or diploma engineers for more than 70% Their position is shortly presented together with their proposed alternative theory when applicable There are nearly 3500 authors of such theories all amazingly very different from one another The main categories of theories are presented in an other book of Jean de Climont THE ALTERNATIVE THEORIES

Procs Of The 32nd Coral Gables Conf Thomas L. Curtright, Arnold Perlmutter, Stephan Mintz, 2005-01-25 Recent experimental results with direct bearing on theories of cosmological dark matter energy as well as continuing work on neutrino masses and mixing have invigorated both particle physics and cosmology and should continue to do so well into the 21st century thereby launching a beautiful new epoch for these fields The expert contributions from this conference took stock of these developments This volume contains papers by over 40 physicists that summarize and interpret the newest findings and suggest future avenues to be explored A number of new theoretical ideas are also presented dealing with progress in understanding the dynamics and symmetries of strings and branes renormalization in quantum field theory possible Lorentz violation effects and related problems Ongoing and next generation gravitational and neutrino experiments are described and the issues of unification are dealt with in the context of and beyond the standard model Together the contributions provide a useful blend of experimental and theoretical physics from many prominent physicists including three Nobel Laureates The volume also contains information of an historical nature concerning the contributions to physics by Paul Frampton on the occasion of his 60th year and summarizing the career of Behram Kursunoglu 1922 2003

The Challenges to Nuclear Power in the Twenty-First Century Behram N. Kursunogamalu, Stephan L. Mintz, Arnold Perlmutter, 2005-12-16 International Energy Forum 1999 was held in Washington D C during November 5 6 1999 in the Hyatt Regency Hotel in Crystal City Once again the main topic was Nuclear Energy Various papers presented contained pros and cons of Nuclear Energy for generating electricity We were aiming to clarify the often discussed subject matter of the virtues of Nuclear Energy with regard to Global Warming as compared to using fossil fuels for the generation of electricity The latter

is also currently the only way to operate our means of transportation like automobiles planes etc Therefore emission into the atmosphere of greenhouse gases constitutes the main source of Global Warming which is absent in the case of Nuclear Energy These arguments are often put forward to promote the use of Nuclear Energy However not all is well with the Nuclear Energy There are the questions of the waste problem so far unsolved safety of Nuclear Reactors is not guaranteed to the extent that they are inherently safe If we aim to construct inherently safe reactors then the economics of a Nuclear Reactor makes it unacceptable

Harald Fritzsch Memorial Volume Gerhard Buchalla, Dieter Luest, Zhi-zhong Xing, 2024-08-08 This book is a tribute to Harald Fritzsch 1943 2022 who has made outstanding contributions to the development of modern particle physics He was a pioneer of QCD the gauge theory of strong interactions and contributed significantly to Grand Unified Theories and to the physics of quark and lepton flavors The present book collects reminiscences of Harald Fritzsch and scientific articles written by friends colleagues collaborators and former students The contributed articles span a wide range of topics reflecting Harald's broad interests in physics from QCD and its applications at high and low energies the flavor puzzle flavor symmetries and textures to gravity constants of Nature and fundamental symmetries and their violation The authors of these articles include among others Siegfried Bethke Johannes Blumlein Stanley J Brodsky Gerard t Hooft Heinrich Leutwyler Hans Peter Nilles Serguey T Petcov Kok Khoo Phua and Willibald Plesas

Global Warming and Energy Policy Behram N. Kursunogamallu, Stephan L. Mintz, Arnold Perlmutter, 2012-12-06 The first part of the conference explores two major environmental concerns that arise from fuel use 1 the prospect that the globe will become warmer as a result of emissions of carbon dioxide and 2 the effect upon health of the fine particles emitted as combustion products The conference focused on the fact that there was lack of data direct enough to enable us to predict an entirely satisfactory result and that makes policy options particularly difficult With regard to 1 above in the second half of the 20th century there were major increases in anthropogenic CO2 emissions and it is generally agreed that these were responsible for an increase in CO2 concentrations But the relationship between global temperature and CO2 concentrations remains murky The principal problem is that water vapor is a more important greenhouse gas than CO2 and that the concentrations of water vapor vary widely in time and space The approach to this problem is probably but not certainly a positive feedback effect as temperature increases so does the water vapor leading to further temperature increases Scientists associated with the Intergovernmental Panel on Climate Change IPCC tend to believe the general features of the models Other scientists are often less convinced

Elementary Particle Standard Model and Quantum Gravity Stephen Blaha, 2003 This book A Finite Unified Quantum Field Theory of the Elementary Particle Standard Model and Quantum Gravity Based on New Quantum Dimensions and a New Paradigm in the Calculus of Variations develops a new formulation of quantum field theory Within this framework a finite unified quantum field theory of the known forces of nature electromagnetism the weak interactions the strong interactions and gravity is created The conventional Standard Model is the large distance limit of the elementary particle sector of the unified theory The Quantum Gravity sector is finite in this formulation Its large distance limit is Einsteinian gravity This unified theory contains no divergences thus solving a major problem that has bedeviled quantum field theory for the past seventy years The theory is based on a new form of hidden dimensions Quantum Dimensions that only manifest themselves at ultra high energies Some new phenomena that result are Unification of QED Weak Interactions Strong Interactions and Quantum Gravity Finite No divergences Finite also with massive vector bosons No need for Higgs mechanism Low Energy Limit Approximates Standard Model and QED to arbitrary accuracy Suggests possible doubly charged dilepton resonances Large Distance limit of Quantum Gravity Newtonian gravitational potential No ultra microscopic Black Holes A New form of hidden dimensions Quantum Dimensions A New form of interaction Dimensional Interactions A New paradigm type of problem for the Calculus of Variations **High Energy Physics Index** ,1990 *Proceedings of the Eleventh Marcel Grossmann Meeting on General Relativity* Hagen Kleinert, Robert T. Jantzen, Remo Ruffini, 2008 The Marcel Grossman Meetings are three yearly forums that meet to discuss recent advances in gravitation general relativity and relativistic field theories emphasizing their mathematical foundations physical predictions and experimental tests These meetings aim to facilitate the exchange of ideas among scientists to deepen our understanding of space time structures and to review the status of ongoing experiments and observations testing Einstein's theory of gravitation either from ground or space based experiments Since the first meeting in 1975 in Trieste Italy which was established by Remo Ruffini and Abdus Salam the range of topics presented at these meetings has gradually widened to accommodate issues of major scientific interest and attendance has grown to attract more than 900 participants from over 80 countries This proceedings volume of the eleventh meeting in the series held in Berlin in 2006 highlights and records the developments and applications of Einstein's theory in diverse areas ranging from fundamental field theories to particle physics astrophysics and cosmology made possible by unprecedented technological developments in experimental and observational techniques from space ground and underground observatories It provides a broad sampling of the current work in the field especially relativistic astrophysics including many reviews by leading figures in the research community International Workshop on Superstrings, Cosmology, Composite Structures, March 11-18, 1987, Center for Theoretical Physics, University of Maryland at College Park Rabindra Nath Mohapatra, 1987 **Acta Physica Hungarica** ,1988 *Advances in Gravitation and Cosmology* ,1993 **Proceedings of the National Academy of Sciences of the United States of America** National
