Quantitative Cytochemistry And Its Applications:

Quantitative Cytochemistry and Its Applications John Ridley Pattison, Lucille Bitensky, Joseph Chayen, 1979

Histochemical and Immunohistochemical Techniques Peter H. Bach, J.R.J. Baker, 2012-12-06 Toxicological and pharmacological effects arise when chemicals interact with biophysiological functions in discrete cell types. There is a continuing need to screen novel compounds for their potential therapeutic effects and once these have been discovered to understand their molecular actions as the basis of using such compounds safely and for rational drug design. Pharmacology now uses all of the sophisticated molecular research techniques that are available for the development of safer and more efficacious drugs. Histochemistry has been usefully applied to developing new drugs and assessing chemical safety and is potentially cost effective. The need to test novel substances for their potential adverse effects has raised many questions. Toxicological pathology has moved away from the cataloging of lesions towards understanding the basis of the events that underly cell injury especially for those secondary consequences of chemical injury that lead to malignancy and chronic disease. The focal nature of toxicologic lesions demands the use of microtechniques to provide data to help understand these questions. Histochemistry is underutilized but offers one of the key approaches necessary to address the problem of understanding interactions between a cell population and a chemical, the modulation of cellular biochemistry or the presence of a lesion in a test animal can be rationalised in terms of species differences that have no relevance to man as opposed to those that are of clinical significance or represent a warning of dire consequences to man.

Theory and Strategy in Histochemistry Hans Lyon, 2012-12-06 If you want practical information on how to use this book please refer to Note to the Readers p VII. Histochemistry and cytochemistry are essential tools in biomedical research and routine service laboratories. Most texts on histochemistry fall into one of two categories: 1. Encyclopaedic texts covering all or nearly all information available on the whole or selected parts of histochemistry. 2. Reviews or surveys of methods found to be useful by the authors. While the former category often appeals to the more philosophically inclined reader, direct guidance on the selection of technique may be difficult to find. In contrast, the latter category are often excellent sources for details on how to perform a particular method with a reasonable chance of success. Consideration of the exact mechanism of staining of possible reasons for failure and of alternative techniques are however frequently lacking. This book is an introduction to the scientific basis of histochemistry and is intended to provide a background for the selection and development of appropriate methods. It is not a cook book and readers expecting exhaustive methodological descriptions will be disappointed. Although most of the contributors to this book would not describe themselves as histochemists, they have all at some time found it essential to develop a basic understanding of histochemistry. This book contains the information they would have greatly appreciated ready access to at that time.

Trends in Enzyme Histochemistry and Cytochemistry David Evered, Maeve O'Connor, 2009-09-16 The Novartis Foundation Series is a popular collection of the proceedings from Novartis Foundation

Symposia in which groups of leading scientists from a range of topics across biology chemistry and medicine assembled to present papers and discuss results The Novartis Foundation originally known as the Ciba Foundation is well known to scientists and clinicians around the world **The Cytochemical Bioassay of Polypeptide Hormones J.**

Chayen,2012-12-06 The cytochemical bioassay system was described in a short abstract in 1971 and more fully in the cytochemical bioassay of corticotrophin in 1972 Since then cytochemical bioassays have been described for several polypeptide hormones and these assays are already widely used It is expedient that the subject should be reviewed as it is in this monograph by one writer who has had the good fortune to have taken part in the growth of cytochemistry from its early origins to its present position as the basis of possibly the most sensitive bioassay system currently available However it should be noted that major contributions have been made by many both to the development of the subject and to the establishment of the bioassays The object of this preface is to try to give some perspective to the growth of this subject and to record that the cytochemical bioassay system has been fostered by many outstanding scientists in an atmosphere of remarkable goodwill To begin with there could have been no cytochemical bioassays until cytochemistry had been converted from its rather unsure origins into a precise and quantitative form of cellular biochemistry This was done with skill and enthusiastic dedication by my colleagues Dr Lucille Bitensky Dr F P Altman Dr R G L W Poulter and Mr A A Silcox first at the Royal College of Butcher Dr **HB CLINICAL CHEMISTRY, VL I** Mario Werner,1982 *CRC Handbook of Clinical Chemistry* Mario Werner,1982 **Histochemistry** P.
