Quantitative Characterization Of Ligand Binding:

Quantitative Characterization of Ligand Binding Donald J. Winzor, William H. Sawyer, 1995-10-30 The book fills the void between rigorous theoretical discussions of ligand binding for physical chemists often beyond the needs of bench experimentalists in the life sciences and compilations of experimental recipes that offer scant regard for the appropriateness of the protocol for the particular ligand interaction under investigation

Fundamental Immunology William E. Paul, 2008 Now thoroughly revised and updated this comprehensive up to date text is ideal for graduate students post doctoral fellows microbiologists infectious disease physicians and any physician who treats diseases in which immunologic mechanisms play a role

Handbook of Biochemical Kinetics Daniel L. Purich, R. Donald Allison, 1999-10-26 Biochemical kinetics refers to the rate at which a reaction takes place Kinetic mechanisms have played a major role in defining the metabolic pathways the mechanistic action of enzymes and even the processing of genetic material The Handbook of Biochemical Kinetics provides the underlying scaffolding of logic for kinetic approaches to distinguish rival models or mechanisms The handbook also comments on techniques and their likely limitations and pitfalls as well as derivations of fundamental rate equations that characterize biochemical processes

Key Features Over 750 pages devoted to theory and techniques for studying enzymic and metabolic processes Over 1 500 definitions of kinetic and mechanistic terminology with key references Practical advice on experimental design of kinetic experiments Extended step by step methods for deriving rate equations Over 1 000 enzymes complete with EC numbers reactions catalyzed and references to reviews and or assay methods Over 5 000 selected references to kinetic methods appearing in the Methods in Enzymology series 72 page Wordfinder that allows the reader to search by keywords Summaries of mechanistic studies on key enzymes and protein systems Over 250 diagrams figures tables and structures

Quantitative Analysis Of Biospec Per Lundahl, Andreas Lundqvist, Eva Greijer, 2021-09-01 First published in 2004 this book collects several up to date methods for quantitative analysis of biospecific interactions a field that has a long history that perhaps can be said to have begun with the classical paper of G Scatchard in 1949 The attractions of proteins for small molecules and ions but which has advanced impressively during the last few years A precise spatial arrangement of just a few hydrogen bonds can confer a remarkably specific reversible association between two molecules A web of weak interactions governs biospecific recognition in general The binding equilibria in living cells tune and coordinate a multitude of functions The thermodynamic properties of such interactions are often studied by binding experiments in simplified and essentially ideal systems However similar types of studies may elucidate the biologically relevant dynamic steady state conditions in living cells and organisms allowing for the very wide range of interactant concentrations and the interplay between the many reactions and interactions The development in biosciences will continue with in depth studies of macromolecules and membranes More detailed knowledge will allow analyses of delicate balances between substances and events in the complex systems involved in life processes Methods to study biospecific affinities are thus highly important
