socioeconomic factors and human needs on older people's health status and happiness. A better understanding of the factors affecting healthy and happy aging is essential for policymaking to improve the well-being of older people. The availability of data from HRS family studies in several Asian countries: CHARLS in China, LASI in India, JSTAR in Japan, KLoSA in Korea, IFLS in Indonesia, HART in Thailand, MARS in Malaysia, and Longitudinal Study of Ageing and Health in Viet Nam, see Gateway to Global Aging Data, provides an excellent opportunity for researchers to examine factors affecting health and happiness among older adults within and across Asian countries. This research topic aims to gather papers that investigate the socioeconomic, attitudinal, and behavioural factors affecting the health status and happiness, life satisfaction of older adults in Asia. The dependent variables may include physical health, mental health, disability, ADL, IADL, cognitive functioning, self-rated health, health expenditure, feeling of happiness, and life satisfaction. The independent variables may be age, gender, marital status, place of residence, educational level, active engagement, work, exercise, social and religious activities, family and social relationship, and support outlook in life, smoking, drinking, and access to and utilization of healthcare services, etc. Manuscripts can be based on individual countries or cross-country analysis, preferably using the panel data to establish the causal effects of the independent variables on the dependent variables.

*Integrating the Smart Home and Its Owner, Books 1 and 2* Andy Lynn Jackson, 2003-03. Did you know that it's not unusual for upscale homeowners to pay 30,000 to 50,000 for high-end home automation? This book shows readers how to do it for one-tenth of that. The author is a former network engineer holding Microsoft and Cisco certifications.

*Construction 4.0* Marco Casini, 2021-11-24. Developments in data acquisition technologies, digital information and analysis, automated construction processes, and advanced materials and products have finally started to move the construction industry, traditionally reluctant to innovation and slow in adopting new technologies, toward a new era. Massive changes are occurring because of the possibilities created by Building Information Modeling, Extended Reality, Internet of Things, Artificial Intelligence, and Machine Learning. Big data, Nanotechnology, 3D printing, and other advanced technologies, which are strongly interconnected, are driving the capabilities for much more efficient construction at scale.

*Construction 4.0: Advanced Technology Tools and Materials for the Digital Transformation of the Construction Industry* provides readers with a state-of-the-art review of the ongoing digital transformation of the sector within the new 4.0 framework, presenting a thorough investigation of the emerging trends, technologies, and strategies in the fields of smart building design, construction, and operation, and providing a comprehensive guideline on how to exploit the new possibilities offered by the digital revolution. It will be an essential reference resource for academic researchers, material scientists, and civil engineers, undergraduate and graduate students, and other professionals working in the field of smart, ecoefficient construction, and cutting-edge technologies applied to construction. Provides an overview of the Construction 4.0 framework to address the global challenges of the building sector in the 21st century and an in-depth analysis of the most advanced digital technologies and systems for the operation and maintenance of infrastructure, real estate, and other built

assets Covers major innovations across the value chain including building design fabrication construction operation and maintenance and end of life Illustrates the most advanced digital tools and methods to support the building design activity including generative design virtual reality and digital fabrication Presents a thorough review of the most advanced construction materials building methods and techniques for a new connected and automated construction model Explores the digital transformation for smart energy buildings and their integration with emerging smart grids and smart cities Reflects upon major findings and identifies emerging market opportunities for the whole AECO sector
