Glasses, Annealing and Computation Shu Tanaka, Ryo Tamura, Bikas K. Chakrabarti, 2017-05-04 Discusses the recent developments in quantum statistical physics of spin glasses and quantum computations Provided by publisher **Natural Computing Algorithms** Anthony Brabazon, Michael O'Neill, Seán McGarraghy, 2015-10-08 The field of natural computing has been the focus of a substantial research effort in recent decades One particular strand of this research concerns the development of computational algorithms using metaphorical inspiration from systems and phenomena that occur in the natural world These naturally inspired computing algorithms have proven to be successful problem solvers across domains as diverse as management science bioinformatics finance marketing engineering architecture and design This book is a comprehensive introduction to natural computing algorithms suitable for academic and industrial researchers and for undergraduate and graduate courses on natural computing in computer science engineering and management science

Finite Element Model Updating Using Computational Intelligence Techniques Tshilidzi Marwala, 2010-06-04 FEM updating allows FEMs to be tuned better to reflect measured data It can be conducted using two different statistical frameworks the maximum likelihood approach and Bayesian approaches This book applies both strategies to the field of structural mechanics using vibration data Computational intelligence techniques including multi layer perceptron neural networks particle swarm and GA based optimization methods simulated annealing response surface methods and expectation maximization algorithms are proposed to facilitate the updating process Based on these methods the most appropriate updated FEM is selected a problem that traditional FEM updating has not addressed This is found to incorporate engineering judgment into finite elements through the formulations of prior distributions Case studies demonstrating the principles test the viability of the approaches and by critically analysing the state of the art in FEM updating this book identifies new research directions **Nature-Inspired Computing** Nazmul H. Siddique, Hojjat Adeli, 2017-05-19 Nature Inspired

Computing Physics and Chemistry Based Algorithms provides a comprehensive introduction to the methodologies and algorithms in nature inspired computing with an emphasis on applications to real life engineering problems The research interest for Nature inspired Computing has grown considerably exploring different phenomena observed in nature and basic principles of physics chemistry and biology The discipline has reached a mature stage and the field has been well established This endeavour is another attempt at investigation into various computational schemes inspired from nature which are presented in this book with the development of a suitable framework and industrial applications Designed for senior undergraduates postgraduates research students and professionals the book is written at a comprehensible level for students who have some basic knowledge of calculus and differential equations and some exposure to optimization theory Due to the

focus on search and optimization the book is also appropriate for electrical control civil industrial and manufacturing engineering business and economics students as well as those in computer and information sciences With the mathematical and programming references and applications in each chapter the book is self contained and can also serve as a reference for researchers and scientists in the fields of system science natural computing and optimization

Militarized Conflict Modeling Using Computational Intelligence Tshilidzi Marwala, Monica Lagazio, 2011-08-24 Militarized Conflict Modeling Using Computational Intelligence examines the application of computational intelligence methods to model conflict Traditionally conflict has been modeled using game theory The inherent limitation of game theory when dealing with more than three players in a game is the main motivation for the application of computational intelligence in modeling conflict Militarized interstate disputes MIDs are defined as a set of interactions between or among states that can result in the display threat or actual use of military force in an explicit way These interactions can result in either peace or conflict This book models the relationship between key variables and the risk of conflict between two countries The variables include Allies which measures the presence or absence of military alliance Contiguity which measures whether the countries share a common boundary or not and Major Power which measures whether either or both states are a major power Militarized Conflict Modeling Using Computational Intelligence implements various multi layer perception neural networks Bayesian networks support vector machines neuro fuzzy models rough sets models neuro rough sets models and optimized rough sets models to create models that estimate the risk of conflict given the variables Secondly these models are used to study the sensitivity of each variable to conflict Furthermore a framework on how these models can be used to control the possibility of peace is proposed Finally new and emerging topics on modelling conflict are identified and further work is proposed

Handbook of Heuristics Rafael Martí, Panos M. Pardalos, Mauricio G.C. Resende, 2025-11-17 The handbook of heuristics consists of five main parts search strategies local search metaheuristics analysis and implementations and applications They cover from search methods and methodological aspects such as matheuristics the exciting field in which mathematical programming is combined with heuristics to applications that provide the practitioner with a description of some relevant optimization issues in a number of specific application areas such as scheduling vehicle routing or network optimization The first edition of the Handbook of Heuristics was published in 2018 and contained 47 chapters In this second edition the authors revised 30 of them to include new developments in the area that appeared in the last few years In particular the reader may find 14 chapters in search strategies including a new chapter on deep learning 4 in local search 14 in metaheuristics 5 in analysis and implementations and 24 in applications The inclusion of 14 new chapters makes this second edition even more comprehensive totaling 61 chapters

- **Vol. 2** Stefano Bellucci, 2006-09-14 A series of books on the general theme of Supersymmetric Mechanics The series is based on lectures and discussions held in 2005 and 2006 at the INFN Laboratori Nazionali di Frascati The selected topics include supersymmetry and supergravity the attractor mechanism black holes noncommutative mechanics super Hamiltonian formalism and matrix models All lectures are intended for beginners at the graduate level and nonspecialists from related fields of research and a substantial effort was made to incorporate in the extensive write ups the results of the animated discussion sessions which followed the individual lectures **Intermolecular Interactions** Il'ia Grigor'evich

Kaplan, 2006-05-18 The subject of this book intermolecular interactions is as important in physics as in chemistry and molecular biology Intermolecular interactions are responsible for the existence of liquids and solids in nature They determine the physical and chemical properties of gases liquids and crystals the stability of chemical complexes and biological compounds In the first two chapters of this book the detailed qualitative description of different types of intermolecular forces at large intermediate and short range distances is presented For the first time in the literature the temperature dependence of the dispersion forces is analyzed and it is shown that the famous Casimir Polder formula for dispersion forces is incorrect at any finite temperature The author has aimed to make the presentation understandable to a broad scope of readers without oversimplification In Chapter 3 the methods of quantitative calculation of the intermolecular interactions are discussed and modern achievements are presented This chapter should be helpful for scientists performing computer calculations of many electron systems The last two chapters are devoted to the many body effects and model potentials More than 50 model potentials exploited for processing experimental data and computer simulation in different fields of physics chemistry and molecular biology are represented The widely used optimization methods simulated annealing diffusion equation method basin hopping algorithm and genetic algorithm are described in detail Significant efforts have been made to present the book in a self sufficient way for readers All the necessary mathematical apparatus including vector and tensor calculus and the elements of the group theory as well as the main methods used for quantal calculation of many electron systems are presented in the appendices All those working on the theoretical and experimental studies of intermolecular interactions in chemistry physics biochemistry and molecular biology will find this text of interest and it will appeal to advanced undergraduates graduates and researchers **Journal of the Physical Society of Japan** ,2018 *Physics of*
