Phase State Transition In Foods Chemical Structural And Rheological Changes:

Phase/State Transitions in Foods, Chemical, Structural and Rheological Changes Rao, 1998-05-27 Covers the basic and applied principles of phase state transitions and analyzes their impact on chemical physical and rheological changes occurring in food during processing preservation and storage offering practical insights on the most effective ways to move product development forward Provides a fundamental understanding of transition phenomena food components and products and unit operations

Food Engineering - Volume I Gustavo V. Barbosa-Cánovas, 2009-08-10 Food Engineering is a component of Encyclopedia of Food and Agricultural Sciences Engineering and Technology Resources in the global Encyclopedia of Life Support Systems EOLSS which is an integrated compendium of twenty one Encyclopedias Food Engineering became an academic discipline in the 1950s Today it is a professional and scientific multidisciplinary field related to food manufacturing and the practical applications of food science These volumes cover five main topics Engineering Properties of Foods Thermodynamics in Food Engineering Food Rheology and Texture Food Process Engineering Food Plant Design which are then expanded into multiple subtopics each as a chapter These four volumes are aimed at the following five major target audiences University and College students Educators Professional practitioners Research personnel and Policy analysts managers and decision makers and NGOs *Rheology of Fluid, Semisolid, and Solid Foods* M. Anandha Rao, 2013-11-19 This revised third edition of Rheology of Fluid Semisolid and Solid Foods includes the following important additions A section on microstructure Discussion of the quantitative characterization of nanometer scale milk protein fibrils in terms of persistence and contour length A phase diagram of a colloidal glass of hard spheres and its relationship to milk protein dispersions Microrheology including detailed descriptions of single particle and multi particle microrheological measurements Diffusive Wave Spectroscopy Correlation of Bostwick consistometer data with property based dimensionless groups A section on the effect of calcium on the morphology and functionality of whey protein nanometer scale fibrils Discussion of how tribology and rheology can be used for the sensory perception of foods

Characterization of Cereals and Flours Gonul Kaletunc, Kenneth J. Breslauer, 2019-07-17 Characterization of Cereals and Flours is a state of the art reference that details the latest advances to characterize the effects of manufacturing processes and storage conditions on the thermal mechanical and structural properties of cereal flours and their products examining the influence of moisture absorption storage temperature baking and extrusion processing on flour and cereal product texture shelf life and quality The book discusses the influence of additives on pre and postprocessed food biopolymers the development of databases and construction of state diagrams to illustrate the state and function of cereal flours before during and after production and the current techniques in image analysis light and electron microscopy and NMR spectroscopy used to analyze the microstructure of cereal products It also discusses the methods used to optimize processing parameters and formulations to produce end products with desirable sensory and textural properties the shelf life

of cereal products and the relationships between the sensory and physical characteristics of cereal foods On using gliadin for micro- and nanocellular foams Silke Quester, 2015-11-25 Bio derived fully biodegradable closed cell micro and nanocellular foams from gliadin an abundantly available wheat storage protein were produced in a newly derived foaming procedure using nitrogen or carbon dioxide as blowing agent First dry gliadin powder or gliadin film was plasticized resulting in a viscoelastic paste that was then subjected to an atmosphere of nitrogen or carbon dioxide in a high pressure cell Subsequent tempering followed by a sudden release of pressure and cooling resulted in closed cell micro or nanocellular foams Depending on the type of blowing agent and the processing parameters the foam morphology was tunable Foams prepared via the proposed procedure exhibit the smallest cell sizes highest cell number density and highest porosity ever reported for foaming of wheat proteins The procedure is simple and low cost possibly leading to a technical realization and constituting a promising new approach for utilization of unique natural potential e g for high technical quality short purpose packaging insulation and application materials that are easily and environmentally friendly recyclable and even edible
