**Several Complex Variables VII** H. Grauert, Thomas Peternell, R. Remmert, 1994-07-12 The first survey of its kind written by internationally known outstanding experts who developed substantial parts of the field The book contains an introduction written by Remmert describing the history of the subject and is very useful to graduate students and researchers in complex analysis algebraic geometry and differential geometry

Remmert, 2010-10-19 The first survey of its kind written by internationally known outstanding experts who developed substantial parts of the field The book contains an introduction written by Remmert describing the history of the subject and is very useful to graduate students and researchers in complex analysis algebraic geometry and differential geometry

Several Complex Variables, 1994

**Dynamical Systems VII** V.I. Arnol'd, S.P. Novikov, 2013-12-14 A collection of five surveys on dynamical systems indispensable for graduate students and researchers in mathematics and theoretical physics Written in the modern language of differential geometry the book covers all the new differential geometric and Lie algebraic methods currently used in the theory of integrable systems

Dynamical Systems IX D.V. Anosov, 2013-03-14 This volume is devoted to the hyperbolic theory of dynamical systems DS that is the theory of smooth DS s with hyperbolic behaviour of the trajectories generally speaking not the individual trajectories but trajectories filling out more or less significant subsets in the phase space Hyperbolicity the property that under a small displacement of any of a trajectory consists in point of it to one side of the trajectory the change with time of the relative positions of the original and displaced points resulting from the action of the DS is reminiscent of the motion next to a saddle If there are sufficiently many such trajectories and the phase space is compact then although they tend to diverge from one another as it were they have nowhere to go and their behaviour acquires a complicated intricate character In the physical literature one often talks about chaos in such situations This type of behaviour would appear to be the opposite of the more customary and simple type of behaviour characterized by its own kind of stability and regularity of the motions these words are for the moment not being used as a strict terminology but rather as descriptive informal terms The ergodic properties of DS s with hyperbolic behaviour of trajectories Bunimovich et al 1985 have already been considered in Volume 2 of this series In this volume we therefore consider mainly the properties of a topological character see below 2 for further details

**Dynamical Systems VIII** V.I. Arnol'd, 2013-03-09 In the first volume of this survey Arnol'd et al 1988 hereafter cited as EMS 6 we acquainted the reader with the basic concepts and methods of the theory of singularities of smooth mappings and functions This theory has numerous applications in mathematics and physics here we begin describing these applications Nevertheless the present volume is essentially independent of the first one all of the concepts of singularity theory that we use are introduced in the course of the presentation and references to EMS 6 are confined to the citation of technical results Although our main goal is the presentation of already formulated theory the reader will also come upon some comparatively recent results apparently

unknown even to specialists We point out some of these results 2 3 In the consideration of mappings from  $C$  into  $C$  in 3 6 of Chapter 1 we define the bifurcation diagram of such a mapping formulate a K n 1 theorem for the complements to the bifurcation diagrams of simple singularities give the definition of the Mond invariant  $N$  in the spirit of hunting for invariants and we draw the reader's attention to a method of constructing the image of a mapping from the corresponding function on a manifold with boundary In 4 6 of the same chapter we introduce the concept of a versal deformation of a function with a nonisolated singularity in the class of functions whose critical sets are arbitrary complete intersections of fixed dimension

**Partial Differential Equations VIII** M.A. Shubin, 2012-12-06 This volume of the EMS contains three articles on linear overdetermined systems of partial differential equations dissipative Schroedinger operators and index theorems Each article presents a comprehensive survey of its subject discussing fundamental results such as the construction of compatibility operators and complexes for elliptic parabolic and hyperbolic coercive problems the method of functional models and the Atiyah-Singer index theorem and its generalisations Both classical and recent results are explained in detail and illustrated by means of examples Dynamical Systems V V.I. Arnold, V.S. Afraimovich, Yu.S. Il'yashenko, L.P. Shil'nikov, 2013-12-01 Bifurcation theory and catastrophe theory are two well known areas within the field of dynamical systems Both are studies of smooth systems focusing on properties that seem to be manifestly non smooth Bifurcation theory is concerned with the sudden changes that occur in a system when one or more parameters are varied Examples of such are familiar to students of differential equations from phase portraits Understanding the bifurcations of the differential equations that describe real physical systems provides important information about the behavior of the systems Catastrophe theory became quite famous during the 1970's mostly because of the sensation caused by the usually less than rigorous applications of its principal ideas to hot topics such as the characterization of personalities and the difference between a genius and a maniac Catastrophe theory is accurately described as singularity theory and its genuine applications The authors of this book previously published as Volume 5 of the Encyclopaedia have given a masterly exposition of these two theories with penetrating insight

*Partial Differential Equations II* Yu.V. Egorov, A.I. Komech, M.A. Shubin, 2013-12-01 This book the first printing of which was published as Volume 31 of the Encyclopaedia of Mathematical Sciences contains a survey of the modern theory of general linear partial differential equations and a detailed review of equations with constant coefficients Readers will be interested in an introduction to microlocal analysis and its applications including singular integral operators pseudodifferential operators Fourier integral operators and wavefronts a survey of the most important results about the mixed problem for hyperbolic equations a review of asymptotic methods including short wave asymptotics the Maslov canonical operator and spectral asymptotics a detailed description of the applications of distribution theory to partial differential equations with constant coefficients including numerous interesting special topics Commutative Harmonic Analysis II Viktor Petrovich Khavin, Nikolai Kapitonovich Nikol'skiĭ, 1998 Classical harmonic analysis is an important part of

modern physics and mathematics comparable in its significance with calculus Created in the 18th and 19th centuries as a distinct mathematical discipline it continued to develop conquering new unexpected areas and producing impressive applications to a multitude of problems It is widely understood that the explanation of this miraculous power stems from group theoretic ideas underlying practically everything in harmonic analysis This book is an unusual combination of the general and abstract group theoretic approach with a wealth of very concrete topics attractive to everybody interested in mathematics Mathematical literature on harmonic analysis abounds in books of more or less abstract or concrete kind but the lucky combination as in this volume can hardly be found

**Introduction to Complex Analysis** E.M. Chirka, A.G. Vitushkin, P. Dolbeault, G.M. Khenkin, 1989-12-12 From the reviews In sum the volume under review is the first quarter of an important work that surveys an active branch of modern mathematics Some of the individual articles are reminiscent in style of the early volumes of the first *Ergebnisse* series and will probably prove to be equally useful as a reference for the appropriate reader they will be valuable sources of information about modern complex analysis Bulletin of the Am Math Society 1991 This remarkable book has a helpfully informal style abundant motivation outlined proofs followed by precise references and an extensive bibliography it will be an invaluable reference and a companion to modern courses on several complex variables ZAMP Zeitschrift f r Angewandte Mathematik und Physik 1990

*Algebraic Geometry I* Игорь Ростиславович Шафаревич, 1994 This book is a very readable introduction to algebraic geometry and will be immensely useful to mathematicians working in algebraic geometry and complex analysis and especially to graduate students in these fields

**Singularity Theory**, 1993 *Bulletin of the Belgian Mathematical Society, Simon Stevin*, 1995 International mathematical news, 1996 Verzeichnis lieferbarer Bücher, 1988 Journal of Lie Theory, 2004 **The Cumulative Book Index**, 1995 A world list of books in the English language **Mathematical Reviews**, 2008 **Several Complex Variables I** Anatolii Georgievich Vitushkin, 1990
