The CAPM with time-varying covariances Sebastian Wilde, 2022-08-31 Seminar paper from the year 2021 in the subject Economics Finance grade 1.3 University of Hagen Fakultät für Wirtschaftswissenschaft Lehrstuhl für Angewandte Statistik language English abstract The CAPM provides a single state single factor general equilibrium theory of the risk return relation However in the 1960s Mandelbrot 1963 already observed stock returns to have a very peaked distribution with heavy tails and also periods of persistent volatility which contradicts the CAPM In response to these observations the Conditional CAPM C CAPM has been discussed by several authors In a C CAPM investors can price an asset or portfolio conditional on the available information at a point in time This is done by replacing the unconditional by conditional moments of returns Statistically processes of Generalized Autoregressive Conditional Heteroscedasticity GARCH can capture the so called stylized facts some observed by Mandelbrot 1963 GARCH models were developed by Engle 1982 and Bollerslev 1986 and try to model time varying second moments of asset returns If a GARCH process is assumed for the disturbance term in a C CAPM a GARCH in mean model GARCH M can be estimated where the conditional variance or covariance impacts the conditional expectation of

excess returns The GARCH M can model time varying conditional moments but also time varying risk premia and the implied beta factor As for this seminar paper I mostly follow the comprehensive dissertation Das CAPM mit zeitabh ngigen Beta Faktoren of Linnenbrink 1998 and the paper of Bollerslev et al 1988 First the theoretical foundations of the CAPM the C CAPM GARCH processes and the GARCH M extension are presented Then in the empirical part I estimate a univariate GARCH M representation of the C CAPM I compare its performance to a traditional CAPM with a single stock portfolio of an investor selected stock Tesla Inc *New Realities* ,1981 **Financial Accounting** Robert W.
